Environmental Regulations and Housing Costs Arthur C. Nelson, John Randolph, James M. McElfish, Joseph M. Schilling, Jonathan Logan, LLC Newport Partners, 2012-06-22 Many communities across the nation still lack affordable housing And many officials continue to claim that affordable housing is an oxymoron Building inexpensively is impossible they say because there are too many regulations Required environmental impact statements and habitat protection laws they contend drive up the costs of construction But is this actually true In a comprehensive study of the question the authors of this eye opening book separate fact from myth With admirable clarity they describe the policy debate from its beginning review the economic theory trace the evolution of development regulation and summarize the major research on the topic In addition they offer their own research accompanied by a case study of two strikingly different Washington D C suburbs They also include results of focus groups conducted in Dallas Denver and Tucson The authors find that environmental regulatory costs as a share of total costs and processes are about the same now as they were thirty years ago even though there are far more regulations today They find too that environmental regulations may actually create benefits that could improve the value of housing Although they conclude that regulations do not appear to drive up housing costs more now than in the past they do offer recommendations of ways in which the processes associated with regulations

including review procedures could be improved and could result in cost savings Intended primarily for professionals who are involved in or impacted by regulations from public officials planners and engineers to housing developers and community activists this book will provide useful insights and data to anyone who wants to know if and how American housing can actually be made affordable *Exercises and Solutions in Statistical Theory* Lawrence L.
