

## TNCC Practice Exam

A 30-week pregnant trauma patient's vital signs include a blood pressure of 94/62 mm Hg and a heart rate of 108 beats/minute. Fetal heart tones are 124 beats/minute. The emergency nurse interprets the patient's hemodynamic findings as an indication of which of the following?

- a. Decompensated shock
- b. Normal vital signs in pregnancy
- c. Abruption placentae
- d. Supine hypotension syndrome - correct answer-b. Normal vital signs in pregnancy

Rationale: In pregnancy, the resting heart rate increases by 10 to 20 beats/minute and a small decrease in systolic blood pressure and a larger decrease in diastolic blood pressure due to a decrease in peripheral resistance (p. 294). Normal fetal heart rate is between 120 and 160 beats/minute (p. 297).

A patient fell two weeks ago, striking his head. He came to the emergency department with a persistent headache and nausea. He was diagnosed with a small subdural hematoma and has been in the ED for 24 hours awaiting an inpatient bed. The night shift nurse reports that he has been anxious, restless, and shaky. He vomited twice during the night. He tells the day shift nurse that he couldn't sleep because a young child kept coming into his room. What is a likely cause for these signs and symptoms?

- a. Increased intracranial pressure
- b. Alcohol withdrawal
- c. Rhabdomyolysis
- d. Pulmonary embolus - correct answer-b. Alcohol withdrawal Rationale: Alcohol withdrawal is a common delayed condition because symptoms are difficult to identify early. Signs include autonomic hyperactivity, hand tremors, nausea or vomiting, psychomotor agitation, anxiety, insomnia, hallucinations, or seizures (p. 397).

A patient with a knife injury to the neck has an intact airway and is hemodynamically stable. He complains of difficulty swallowing and speaking. Further assessment is indicated next for which of the following conditions?

- a. Damage to the spinal cord
- b. An expanding pneumothorax
- c. Laceration of the carotid artery
- d. Injury to the thyroid gland - correct answer-a. Damage to the spinal cord Rationale: Penetrating neck trauma may include concurrent injuries to the spinal cord, airway, or vascular neck structures. With an intact airway and hemodynamic stability, the other common concurrent injury is to the spinal cord (pp. 124, 126).

A patient with a spinal cord injury at C5 is being cared for in the emergency department while awaiting transport to a trauma center. Which of the following represents the highest priority for ongoing assessment and management?

- a. Maintain adequate respiratory status
- b. Administer balanced resuscitation fluid
- c. Perform serial assessments of neurologic function
