Life-cycle Analysis of Energy Systems Bent Sørensen, 2011 Life cycle assessment of new energy solutions plays an important role in discussions about global warming mitigation options and the evaluation of concrete energy production and conversion installations This book starts by describing the methodology of life cycle analysis and life cycle assessment of new energy solutions It then goes on to cover in detail a range of applications to individual energy installations national supply systems and to the global energy system in a climate impact context Coverage is not limited to issues related to commercial uses by consultants according to ISO norms It also emphasizes life cycle studies as an open ended scientific discipline embracing economic issues of cost employment equity foreign trade balances ecological sustainability and a range of geo political and social issues A wealth of applications are described and a discussion on the results obtained in each study is included Example areas are fossil and nuclear power plants renewable energy systems and systems based on hydrogen or batteries as energy carriers The analysis is continued to the end users of energy where energy use in transportation industry and home are scrutinized for their life cycle impacts Biofuel production and the combustion of firewood in home fireplaces and stoves are amongst the issues discussed A central theme of the book is global warming The impacts of greenhouse gas emissions are meticulously mapped at a depth far beyond that of the IPCC reports A novel and surprising finding is that more lives will be saved than lost as a direct consequence of a warmer climate After a 2oC increase in temperature the reduction in death rates in areas with cold winters would outweigh the increase in the death rates in hot climates However this is only one of several impacts from greenhouse gases and the remaining ones are still overwhelmingly negative The fact that some population groups may benefit from higher temperatures notably the ones most responsible for greenhouse gas emissions whilst others who did not contribute much to the problem suffer is one of the main points of the book The book is suitable as a university textbook and as a reference source for engineers managers and public bodies responsible for planning and licensing *Plunkett's Renewable, Alternative & Hydrogen Energy Industry Almanac 2009* Jack W. Plunkett, 2009 There are few industry sectors in the world today with more potential than renewable and hydrogen energy Clean green and renewable energy technologies are receiving immense emphasis from investors environmentalists governments and major corporations

New Generation of Engine... Pierre Duret, There is growing interest in the new generation of engine combustion processes that are emerging from research and development projects worldwide. The new combustion processes generally bring about significant improvements in fuel economy combined with ultra low emissions of pollutants. The French Petroleum Institute, an internationally recognized expert in new engine combustion processes, organized an international congress whose proceedings are presented in this book. The meeting provided an opportunity for experts from the automotive industry, the heavy duty and small engine sectors, OEM suppliers, fuel companies and R & D organizations to exchange views on the chances of success of newly developed engine combustion processes.

Hydrogen and Fuel Cells Bent Sorensen, 2005-02-17 The next several years will see a massive emergence of hydrogen fuel cells as an alternative energy option in both transportation and domestic use. The long range expectation is that hydrogen will be used as a fuel produced either from renewable energy, fossil or nuclear sources, offering an environmentally acceptable and efficient source of power. *Hydrogen and Fuel Cells* describes in detail the techniques associated with all the production and conversion steps and the set up of systems at a level suited for both academic and professional use. The book not only describes the how and where aspects, hydrogen fuel cells may be used but also the obstacles and benefits of its use as well as the social implications, both economically and environmental. Thoroughly illustrated and cross referenced, this is the ultimate reference for researchers, professionals and students in the field of renewable energy. Written by a world renowned leader in the study of renewable energy, *Hydrogen and Fuel Cells* is thoroughly illustrated with cross references for easy use and reference. Coopetition Strategy Giovanni B. Dagnino, Elena Rocco, 2009-09-10 This innovative book portrays the state of the art of coopetition strategy, regarded as a compelling mindset to exploit entirely the potential of actors' interdependencies: firms, governments, suppliers, customers, scientists and partners in today's global scenarios. It provides the rudiments for navigating

an exploration journey into a virtually new and emergent management subfield This volume presents three key distinctive features it is the first attempt that delves systematically and rigorously into coopetition strategy and coopetitive behaviour it clearly elucidates the contribution of coopetition to the advancement of strategic management and managerial practice it is the outcome of the collective brains of several scholars with diverse geographical roots and backgrounds who cultivate original research on co opetition strategy from a variety of perspectives economic managerial political and multiple methods theory building game theoretical experimental and inductive case based inquiries Looking into this volume the reader will realize that while the topic is at the beginning of its lifecycle coopetition strategy has touched an important crossroads which solicits a more comprehensive and systematic assessment If mindfully formulated and implemented this hybrid strategic option is able to increase returns and generate value for shareholders entrepreneurs managers and coopetitors
