in the use of ontologies for multi agent system app cations On the one hand the agent paradigm is successfully employed in
those applications where autonomous loosely coupled heterogeneous and distributed systems need to interoperate in order
to achieve a common goal On the other hand ontologies have established themselves as a powerful tool to enable kno edge
sharing and a growing number of applications have bene ted from the use of ontologies as a means to achieve semantic
interoperability among heterogeneous distributed systems In principle ontologies and agents are a match made in heaven

environment to make autonomous decisions and to be proactive on behalf of its user Communication ultimately depends on

understanding the goals preferences and constraints posed by the user Autonomy is the ability to perform a task with little or no user intervention while proactiveness involves acting autonomously with no need for user prompting Communication but also autonomy and proactiveness depend on knowledge The ability to communicate depends on understanding the syntax terms and structure and the semantics of a language Ontologies provide the terms used to describe a domain and the semantics associated with them In addition ontologies are often complemented by some logical rules that constrain the meaning assigned to the terms These constraints are represented by inference rules that can be used by agents to perform the reasoning on which autonomy and proactiveness are based [Daily Graphic Yaw Boadu-Ayeboah](#), 2006-10-14 *Focus On: 100 Most Popular Compact Cars* Wikipedia contributors, **News** United States.
