Supply Chains in Reverse Logistics Robert Stanisławski, Andrzej Szymonik, 2023-12-20 Currently it is obvious that new types of production Industry 4 0 are accompanying new ways of distribution which advance logistics physical distribution science and even supply chain management The changing environment for carrying out logistics activities is also important for the development of the supply chain Care for ecology the recent pandemic and the situation in Ukraine are other reasons to adapt logistics to the needs of an individual customer recipient It would be impossible without developing an appropriate strategy and applying appropriate tools for managing supply chains in the national and international dimensions This book specifically addresses these issues When analyzing the needs and structure of modern supply chains in the context of their safety and risk reduction it is impossible to ignore the problem of digitization which allows for logistic analysis of the company determining optimal routes designing logistic systems optimizing storage processes and costs and predicting possible threats crisis situations and their effects losses IT support automatic data exchange e logistics telematics traceability and chatbots between various departments of the company along the upper and lower parts of the supply chain improve the flow of material and accompanying information through automation robotization proactivity and document digitization These new trends make it possible to define logistics as modern logistics using new achievements of science and technology Modern logistics must also consider ecological aspects in line with assumptions about protecting the environment and improving our climate Efficiently organized reverse logistics is not without significance for ecology It is supported by renewable energy electric vehicles proper education in the field of a closed economy cleaner production waste minimization the use of passive infrastructure and proper waste management that allows us to positively influence environmental protection and human health To meet the needs of creating modern supply chains

The Evolution of European Manufacturing Industries Bolesław Domański, Grzegorz Micek, Robert Guzik, Krzysztof Gwosdz, Arkadiusz Kocaj, 2024-08-29 The book provides a picture of the increasing significance of Central Europe and especially Poland in global production networks discussing the underlying economic social and political factors The key question it answers is to what extent the growth of production and exports results in industrial upgrading towards the manufacturing of more sophisticated high value added products new technologies and the development of non production functions especially design and advanced service capabilities The book shows that Central European manufacturing no longer exhibits the typical features of production activities in the periphery in particular low density and diversity low productivity narrow specialisation in low value added activities and poor local linkages hence limited local value creation and value capture There is still dependence on foreign controlled enterprises in several sectors and limited product innovation which remains a major weakness Further the book assesses the social consequences of the ongoing development of manufacturing capabilities in Poland and its impact on employment conditions including the quality of jobs and level of wages The authors provide insight into relationships between globalisation processes place specific attributes and current economic policies and as such the book will be of interest to academics policy makers and other stakeholders interested in both peripheral economies and core countries and representing various international organisations dealing with economic transition and development
