Economics, second edition Ronald C. Griffin, 2016-03-11 Updated edition of a comprehensive introduction to the economics of water management with self contained treatment of all necessary economic concepts Economics brings powerful insights to water management but most water professionals receive limited training in it The second edition of this text offers a comprehensive development of water resource economics that is accessible to engineers and natural scientists as well as to economists The goal is to build a practical platform for understanding and performing economic analysis using both theoretical and empirical tools Familiarity with microeconomics or natural resource economics is helpful but all the economics needed is presented and developed progressively in the text The book focuses on the scarcity of water quantity rather than on water quality The author presents the economic theory of resource allocation recognizing the peculiarities imposed by water and then goes on to treat a range of subjects including conservation groundwater depletion water law policy analysis cost benefit analysis water marketing privatization and demand and supply estimation Added features of this updated edition include a new chapter on water scarcity risk with climate change and necessary risk tools introduced progressively and new risk attentive material elsewhere in the text sharper treatment of block rates and pricing doctrine expanded attention to contemporary literature and issues and new appendixes on input output analysis water footprinting and virtual water and cost allocation Each chapter ends with a summary and exercises

*Water Services Disputes in International Arbitration* Xu Qian, 2020-05-12 *Water Services Disputes in International Arbitration* Reconsidering the Nexus of Investment Protection Environment and Human Rights by Xu Qian The argument that universal access to water is a human right is based on the fact that life on Earth cannot exist without water Yet the enormous cost of building and maintaining water service infrastructure purifying monitoring quality and providing sanitation services is beyond the means of many of the States most in need Foreign investment is thus mandated hence the often acrimonious tension manifest in investor State disputes over water rights This book offers the first in depth analysis of both international treaty norms and their interpretation by arbitral tribunals applicable to investment in water and sanitation services complete with thoroughly researched recommendations for those arbitral practitioners in the eye of the storm Like no previous study the book clearly reveals how to reconcile the economic and fundamental human interests arising from investment in water and sanitation services under the international investment regime Among many vital issues the author highlights the importance of the following legitimacy of a State s alleged regulatory objectives the suitability of the measures undertaken to achieve the objective and whether there are less restrictive means available legal framework and stability of the State applicable law changes in law and emergency circumstances economic issues such as water pricing profit driven private companies reluctance to serve the poor investment tribunals generation of a regulatory and jurisprudential regime on water and sanitation services and determination of liability in relation to expropriation fair and equitable treatment and necessity Arguing that the current investment treaty and arbitral case law framework can regulate water and sanitation services if

certain interpretations are favored by adjudicators the author offers viable sustainable and reasonable legal solutions A detailed annex presents cases decided before a variety of arbitral tribunals as well as relevant WTO and ICJ cases and reviews critical literature in the field The increasing number of cases involved with States regulatory measures shows that stakes around water services generate specific legal problems which are new in the world of international economic law As an incisive investigation of what has been called the incursion of investment tribunal decisions into the regulatory autonomy of host States this profound and innovative analysis provides a coherent and consistent method of review that provides greater certainty to both States and investors and deters abuse of power It will be welcomed by policymakers and stakeholders interested in the implications of globalization of water services for the capacity to adapt to climate change and will suggest ways to enable States to better manage vital water services even after privatization to foreign companies

*The Routledge Companion to Network Industries* Matthias Finger,Christian Jaag,2015-11-19 In recent decades network industries around the world have gone through periods of de and re regulation With vast amounts of sometimes conflicting research carried out into specific network industries the time has come for a critical over arching assessment of this entire industry in order to provide a platform of understanding to aid future research and practice This comprehensive resource provides an orientation for academics policy makers and managers as to the main economic regulatory and commercial challenges in the network industries The book is split into sections covering market policy regulation management perspectives whilst all of the key network industries are covered including energy transport water and telecommunications Overseen by world class Editors and experts in the field this inter disciplinary resource is essential reading for students and researchers in international business industrial economics and the industries
