- Check that **Mountain stream** and **Short-term erosion** are selected.
- If necessary, click outside the circle to close the zoomed-in view.

Introduction: **Erosion** occurs when sediments and other materials are moved from one place to another. Along with **weathering**, which is the breakdown of large rocks into smaller sediments, erosion can have a profound impact on the landscape.

Question: How does river erosion affect landscapes in the mountains?

1. **Label:** First, get to know some of the different parts of a mountain stream. Turn on **Show labels**. Label the image to the right, then fill in the word that goes with each description.

A small stream that flows into a larger stream:

tributary

A place along a stream where water drops straight down:

waterfall

A letter that describes the shape of a typical mountain valley:

V-shaped valley

The side of a stream:

streambed

The bottom of a stream:

streambank

2. **Observe:** Turn off **Show labels**. Next to "Release barrel," click **Play** (). Observe how fast the barrel moves as it floats down the stream.

What happens when the barrel goes over the **waterfall**?

It continues to be on the side that it was before it plunged from the waterfall.

3. **Calculate:** The two red flags are 100 meters apart. The time at which the barrel passes the flag is shown. Remember, there are 60 seconds in a minute.

A. How many seconds did it take for the barrel to go 100 meters?

1 min 30 sec

B. To find the barrel's speed, use a calculator to divide the distance traveled (100 m) by the time it took the barrel to float 100 m. The units are meters per second (m/s).

What is the speed of the barrel?

$100\text{m}/90\text{sec}$
 $=1.1$
