

Anatomy of a Wave Worksheet **Answers**

Objective: Identify the parts of a wave and draw your own diagrams of waves.

Background: Many types of waves exist, including electromagnetic waves and mechanical waves. Waves move in different ways and have different properties.

Part 1

In the diagram below, identify the parts of a wave by using the provided definitions.

- # 5 = crest The highest point of the wave above the line of origin.
- # 2 = trough The lowest point of the wave below the line of origin.
- # 1 = line of origin Signifies the original position of the medium.
- # 3 = wavelength The distance between two consecutive crests.
- # 4 = amplitude The distance from the line of origin to a crest or trough of a wave.

Part 2

On separate sheets of graph paper, draw four different waves with the following measurements. Label the parts and include the measurements.

wave #	crest	trough	wavelength
1	1 cm	1 cm	2 cm
2	3.5 cm	3.5 cm	2.5 cm
3	.5 cm	.5 cm	3 cm
4	2 cm	2cm	.5 cm

Concluding question: State which wave you think has the *highest frequency* and which might have the *lowest frequency*. Explain the reasons for your selections.

#4 has the highest frequency because it has the shortest wavelength, and frequency is inversely proportional to wavelength.

#3 has the lowest frequency because it has the longest wavelength, and frequency is inversely proportional to wavelength.

The Earth's Plasmasphere Fabien Darrouzet,Johan de Keyser,Viviane Pierrard,2009-08-21 James L Burch C Philippe Escoubet Originally published in the journal Space Science Reviews Volume 145 Nos 1 2 1 2 DOI 10 1007 s11214 009 9532 7 Springer Science Business Media B V 2009 The IMAGE and CLUSTER spacecraft have revolutionized our understanding of the inner magnetosphere and in particular the plasmasphere Before launch the plasmasphere was not a prime objective of the CLUSTER mission In fact CLUSTER might not have ever observed this region because a few years before the CLUSTER launch at the beginning of the 1990s it was proposed to raise the perigee of the orbit to 8 Earth radii to make multipoint measurements in the current disruption region in the tail Because of ground segment constraints this proposal did not materialize In view of the great depth and breadth of plasmaspheric research and numerous papers published on the plasmasphere since the CLUSTER launch this choice certainly was a judicious one The fact that the plasmasphere was one of the prime targets in the inner magnetosphere for IMAGE provided a unique opportunity to make great strides using the new and complementary measurements of the two missions IMAGE with sensitive EUV cameras could for the first time make global images of the plasmasphere and show its great variability during storm time CLUSTER with four spacecraft could analyze in situ spatial and temporal structures at the plasmopause that are particularly important in such a dynamic system
