Atlas of Ultrasound- and Nerve Stimulation-Guided Regional Anesthesia Ban C.H. Tsui, 2007-11-13 There are few situations in anesthesia where precise anatomic location is more important than in regional anesthesia. But of course any anesthesiologist who performs regional on a regular basis is fully aware of the frustration of attempting to locate nerves on a trial and error basis. Ultrasound imaging now enables us to visualize nerves and this exciting technology offers several distinct benefits over conventional nerve locating techniques. The Atlas of Ultrasound and Nerve Stimulation Guided Regional Anesthesia illustrates how to use ultrasound technology and nerve stimulation techniques to achieve consistently good results. Throughout the book ultrasound images are correlated with MRI images to enhance anatomic identification. In addition peripheral nerve block techniques for upper and lower extremities and the trunk are demonstrated step by step. With the luxury of being able to actually see the target nerve and the course of the needle as it approaches that nerve anesthesiologists can now perform regional anesthesia with much greater accuracy. This approach allows the anesthesiologist to conduct regional anesthesia with much greater confidence and efficiency and in doing so the patient is the ultimate beneficiary in terms of success and safety. The book features well illustrated comparisons of anatomic drawings, cadaveric images and ultrasound and MRI images. Also Detailed description of relevant anatomy followed by a clinical description of performing ultrasound imaging and subsequent blockade of target nerves. Side by side comparison of labeled and unlabeled ultrasound images simulating the clinician's experience in everyday practice. Both common and alternative approaches are discussed in detail each discussion calling upon the wisdom of experts in the field of regional anesthesia. Clinical pearls about needle adjustment included in troubleshooting tables in the nerve stimulation sections. Radiology in Global Health Daniel J. Mollura, Matthew P. Lungren, 2014-07-02 The World Health Organization stated that approximately two thirds of the world's population lacks adequate access to medical imaging. The scarcity of imaging services in developing regions contributes to a widening disparity of health care and limits global public health programs that require imaging. Radiology is an important component of many global health programs including those that address tuberculosis, AIDS related disease, trauma, occupational and environmental exposures, breast cancer screening and maternal infant health care. There is a growing need for medical imaging in global health efforts and humanitarian outreach particularly as an increasing number of academic, government and non governmental organizations expand delivery of health care to disadvantaged people worldwide. To systematically deploy clinical imaging services to low resource settings requires contributions from a variety of disciplines such as clinical radiology, epidemiology, public health, finance, radiation physics, information technology, engineering and others. This book will review critical concepts for those interested in managing, establishing or participating in a medical imaging program for resource limited environments and diverse cross cultural contexts undergoing imaging technology adaptation. , **Combat Radiology** Les R. Folio, 2010-08-03 Combat Radiology provides unique insights into a military

radiologist's role in the modern battlefield environment Drawing on his recent experiences in Iraq Col Les Folio a retired air force radiologist and flight surgeon with over twenty years of service presents a comprehensive introduction to diagnostic imaging technology for the deployed military physician Topics in the book include descriptions of imaging capabilities of hospitals in deployed military bases in combat zones practical imaging techniques and terminology associated with penetrating perforating blast and ballistic injuries recent medical advances on the battlefield and the changing role of imaging modalities in combat situations Additionally specific anatomic and pathologic imaging cases from combat situations are presented including traumatic brain injury chest abdomen pelvis and skeletal trauma Combat Radiology will appeal not only to military radiologists and surgeons but also to civilian emergency radiologists and trauma physicians who encounter patients with ballistic and blast injuries resulting from armed conflict terrorism and disaster situations Medicine Meets Virtual Reality 16 James D. Westwood, 2008 We humans are tribal grouping ourselves by a multitude of criteria physical intellectual political emotional etc The Internet and its auxiliary technologies have enabled a novel dimension in tribal behavior during our recent past This growing connectivity begs the question will individuals and their communities come together to solve some very urgent global problems At MMVR we explore ways to harness information technology to solve healthcare problems and in the industrialized nations we are making progress In the developing world however things are more challenging Massive urban poverty fuels violence and misery Will global networking bring a convergence of individual and tribal problem solving Recently a barrel shaped water carrier that rolls along the ground was presented improving daily life for many people Also the One Laptop per Child project is a good example of how the industrialized nations can help the developing countries They produce durable and simple laptops which are inexpensive to produce At MMVR we focus on cutting edge medical technology which is generally pretty expensive While the benefits of innovation trickle downward from the privileged few to the broader masses we should expand this trickle into a flood Can breakthrough applications in stimulation visualization robotics and informatics engender tools as ingeniously as the water carrier or laptop With some extra creativity we can design better healthcare for the developing world too **Practical Ultrasound in Anesthesia for Critical Care and Pain Management** Philip M.
