Perhaps you've caught yourself saying that exact line a time or two, but what does that even mean? Far too many of us have allowed this idea of being busy to become a form of currency. It's a status symbol devoid of real value, yet it provides a quick escape from authenticity, enabling a facade upon which we've built our lives. Several years ago Dan Irvin decided to stop being busy and focused on being more. This shift to a more intentional lifestyle transformed all aspects of his life and profoundly impacted the audiences he encourages as a professional speaker. In this book, he shares those secrets while challenging readers to embrace their authentic selves and break free of letting deliberate actions in their personal and professional lives slip into auto-pilot routines. Living consciously and intentionally means creating a success framework that genuinely motivates and structures individuals, leaders, and their teams. This book is a pathway for readers to move beyond their busyness and lead a more authentic, purposeful life. *From Where I Sit* Mark L. Winston, 2018-05-31

A scientist before he was a beekeeper, Mark L. Winston found in his new hobby a paradigm for understanding the role science should play in society. In essays originally appearing as columns in *Bee Culture*, the leading professional journal, Winston uses beekeeping as a starting point to discuss broader issues such as how agriculture functions under increasingly complex social and environmental restraints, how scientists grapple with issues of accountability, and how people struggle to maintain contact with the natural world. Winston's reflections on bees, beekeeping, and science cover a period of tumultuous change in North America, a time when new parasites reduced research funding and changing economic conditions have disrupted the livelihoods of bee farmers. Managed honeybees in the city provide a major public service by pollinating gardens, fruit trees, and berry bushes and should be encouraged rather than legislated out of existence. Our cities, groomed and cosmopolitan as they appear, still obey the basic rules of nature, and our gardens and yards are no exception. Homegrown squashes, apple trees, raspberries, peas, beans, and other garden crops require bees to move the pollen from one flower to another, no matter how urbanized or sophisticated the neighborhood. *American Bee Journal*, 1861. Includes summarized reports of many beekeeper associations.
