Hydrologic Science Priorities for the U.S. Global Change Research Program National Research Council,Division on Earth and Life Studies,Commission on Geosciences, Environment and Resources,Committee on Hydrologic Science,1999-11-04 The availability of fresh water is potentially one of the most pervasive crises of the coming century Water related decisions will determine the future of major ecosystems the health of regional economies and the political stability of nations A vigorous program of research in hydrologic sciences can provide the basis for sound water management at local regional national and international levels The Committee on Hydrologic Science was established by the National Research Council in 1999 to identify priorities for hydrologic science that will ensure its vitality as a scientific discipline in service of societal needs This charge will be performed principally through a series of studies that provide scientific advice on the hydrologic aspects of national program and U S hydrologic contributions to international programs This first report contains a preliminary assessment of the hydrologic science content of the U S Global Change Research Program USGCRP Because this is a short and focused report little effort is spent to reaffirm the established and successful elements of the USGCRP In fact the Committee generally endorses the findings of the National Research Council NRC report Global Environmental Change Research Pathways for the Next Decade NRC 1998a the so called Pathways report in this respect Instead the attention here is directed toward the most critical missing hydrologic science elements in the FY2000 USGCRP This brings the focus to the terrestrial component of the water cycle The integrative nature of terrestrial hydrology could significantly strengthen the USGCRP *Water-resources Investigations Report* ,2000 Observing Global Climate Change Kyrill Ya Kondratyev,Arthur P. Cracknell,2017-12-14 This collaborative book aims to offer a comprehensive introduction to global climate the way it is currently changing the role of earth air and satellite observation and monitoring and subsequent climate modelling It focuses on the interaction between natural and anthropogenic human made change factors The book emphasizes the importance of capturing climatic data and the use of that data in computer based climatic modelling **Selected Water Resources Abstracts** ,1991 Environmental Protection Research Catalog: Indexes Smithsonian Science Information Exchange,1972 **Spotlight Science Teacher Support Pack 9** Keith Johnson,Lawrie Ryan,Sue Adamson,2004 This Framework Edition Teacher Support Pack offers support and guidance Xenobiotics in the Urban Water Cycle Despo Fatta-Kassinou,Kai Bester,Klaus Kümmerer,2010-01-06 The history of chemistry and pharmaceutical sciences is an impressive success story The products of chemical and pharmaceutical industries are present everywhere in our everyday life

They help to pursue the modern way of living and they contribute to our high standard of living and safety mobility communication technologies food health textiles and drinking water treatment among many others These products are labeled under the categories pharmaceuticals pesticides detergents fertilizers dyes paints preservatives food additives and personal care products to name a few Within these categories groups of chemicals with similar structures can be found However often groups of chemicals with very different structures belong to the same category For a long time the production of chemicals and pharmaceuticals their usage and application was connected with the heavy pollution of the environment and serious health effects At the end of the last century it was realised that the products of chemical and pharmaceutical industries are presenting a new type of environmental pollution that may also pose a health risk to the consumer Most chemicals are used in so called open applications in excessive amounts e.g. for personal care hygiene plant protection health and in textiles In many cases such as scents detergents textile chemicals surface disinfectants pesticides and others it is unavoidable that these chemicals are released into the environment according to their intended use
