

Conclusion

Water pollution is a major problem affecting human health and the environment worldwide. The main sources of water pollution are industrial waste, agricultural runoff, and sewage disposal.

Water pollution can cause serious public health issues by contaminating drinking water supplies and increasing the risk of water-borne diseases. It also damages aquatic ecosystems by depleting oxygen levels and killing fish and other marine life. To solve the global water pollution crisis,

Governments need to establish and enforce stricter regulations on industrial and agricultural waste disposal. Wastewater treatment facilities must be upgraded to remove contaminants more effectively before water is discharged back into the environment.
