Kevin J. Gaston, 2003-05-01 No species occurs everywhere Indeed the majority are absent from most places and where they  
do occur they are usually quite rare Gaston discusses the structure of these distributions the structure of the geographic  
ranges of species Gaston is particularly concerned with the factors that determine the limits to a species geographic range  
how the sizes of those ranges vary and patterns in that variation Also considered are the distribution of individuals amongst  
those sites where a species does occur and what determines that distribution and some of the practical implications of all  
these Both in a pure and applied context ecologists need a broader perspective on their subject matter than has historically  
prevailed This book provides one such perspective A must have book for any researchers and graduate students studying
