

The first of these is the *Apis mellifera*, the common honey bee. It is a very common and useful insect, and is the most important of the bees. It is a social insect, and lives in colonies. The colonies are built in hives, and the bees work together to collect nectar from flowers and convert it into honey. The honey is then stored in the hive for use by the colony. The bees also collect pollen from flowers, which they use to make honeycomb. The honeycomb is made of wax, which the bees secrete from their bodies. The honeycomb is used to store honey and to raise young bees. The bees also use the honeycomb to build their nests. The bees are very important to the world, as they are responsible for the production of many of the foods that we eat. Without bees, many of the fruits and vegetables that we eat would not be able to reproduce. Bees are also important for the production of honey, which is a very healthy and delicious food. Bees are also important for the environment, as they help to pollinate many of the plants that we need for food and for the environment. Bees are a very important part of our world, and we should all do our best to protect them.

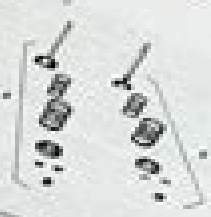

The second of these is the *Bombus* genus, which includes the bumblebees. Bumblebees are also social insects, and live in colonies. They are very important for the pollination of many of the plants that we need for food and for the environment. Bumblebees are also important for the production of honey, which is a very healthy and delicious food. Bumblebees are also important for the environment, as they help to pollinate many of the plants that we need for food and for the environment. Bumblebees are a very important part of our world, and we should all do our best to protect them.

The third of these is the *Apis cerana*, the eastern honey bee. It is a very common and useful insect, and is the most important of the bees. It is a social insect, and lives in colonies. The colonies are built in hives, and the bees work together to collect nectar from flowers and convert it into honey. The honey is then stored in the hive for use by the colony. Bees are a very important part of our world, and we should all do our best to protect them.

REPRODUCTION OF BEEHIVES
The reproduction of beehives is a complex process. It involves the queen bee, the workers, and the drones. The queen bee is the only female in the colony that is able to lay eggs. She lays eggs in the honeycomb, and the workers take care of the eggs and the young bees. The drones are male bees that are responsible for mating with the queen. They do not work in the hive, and they do not collect nectar or pollen. They are only there to mate with the queen. The reproduction of beehives is a very important part of the life cycle of the bees, and it is essential for the survival of the colony.

The fourth of these is the *Apis mellifera*, the common honey bee. It is a very common and useful insect, and is the most important of the bees. It is a social insect, and lives in colonies. The colonies are built in hives, and the bees work together to collect nectar from flowers and convert it into honey. The honey is then stored in the hive for use by the colony.
