The Vixen Star Book User Guide James Chen, Adam Chen, 2015-10-01 This book is for anyone who owns or is thinking of owning a Vixen Star Book Ten telescope mount or its predecessor. A revolution in amateur astronomy has occurred in the past decade with the wide availability of high-tech computer-driven Go To telescopes. Vixen Optics is leading the way by offering the Star Book Ten system with its unique star map graphics software. The Star Book Ten is the latest version of computer telescope control using star map graphics as a user interface first introduced in the original Star Book first offered in 2003. The increasingly complicated nature of this software means that learning to optimize this program is not straightforward and yet the resulting views when all features are correctly deployed can be phenomenal. After a short history of computerized Go To telescopes for the consumer amateur astronomer market, Chen offers a treasury of technical information. His advice, tips, and solutions aid the user in getting the most out of the Star Book Ten system in observing sessions.

*The NexStar User's Guide* Michael Swanson, 2004-01-30 Michael Swanson's online discussions with literally thousands of NexStar owners made it clear that there was a desperate need for a book such as this one that provides a complete, detailed guide to buying, using, and maintaining NexStar telescopes. Although this book is highly comprehensive, it is suitable for beginners; there is a chapter on Astronomy Basics and experts alike. Celestron's NexStar telescopes were introduced in 1999, beginning with their first computer-controlled go-to model, a 5-inch. More models appeared in quick succession and Celestron's new range made it one of the two dominant manufacturers of affordable go-to telescopes.

the latest thinking and scientific developments that could allow us to overcome them NASA scientist Les Johnson begins by surveying the vast hostile landscape between stars we ll need to traverse an extremely cold mysterious expanse rife with harsh radiation and cosmic dust He describes our first sallies into this sphere with forerunners like the Voyager craft now well on their way into the interstellar medium and new extrasolar probes currently being planned that will venture farther beyond our solar system and launch within our lifetimes He next considers who our interstellar explorers will be first robots followed by humans and what each will entail before delving into the mind boggling science of how one would actually propel an interstellar starship Johnson explains the most promising approaches from antimatter powered rockets to the light filled sails scientists like himself are piloting now and discusses other design challenges to be overcome like power and communications The book closes with a chapter exploring the real science of sci fi and pop culture fixtures like warp drives and wormholes and a conclusion that considers what it will take as a society to realize our interstellar future
