Printed on 11/1/2023

## Stars

Name: \_\_\_\_\_ Date: \_\_\_\_\_

### Match or Draw a Star

1. Stars are made up of hydrogen.
2. All stars are the same size, color, and temperature.
3. The color of a star indicates its temperature.
4. Stars produce energy through nuclear fusion.
5. Stars will never run out of fuel and will continue shining forever.

### Short answer questions

1. What are stars made of?
2. How do stars produce energy?
3. What is a light year?
4. How are stars born?
5. What happens to a star when it runs out of fuel?

Printed on 11/1/2023

## Stars

Stars are one of the most amazing things in the night sky. They are giant balls of gas that shine brightly in the darkness. There are billions and billions of stars in the universe, and each one is unique in its own way.

Stars come in different sizes, colors, and temperatures. Some stars are small and cool, while others are huge and hot. The color of a star can tell us how hot it is. For example, a blue star is much hotter than a red star. Stars also have different lifespans. Some stars live for billions of years, while others only live for a few million years.

Stars are born in clouds of gas and dust called nebulae. These clouds are scattered throughout space, and when they collapse under their own gravity, a new star is born. The birth of a star is a beautiful and magical event that can take millions of years to complete.

Once a star is born, it spends most of its life shining brightly in the sky. Stars produce energy through a process called nuclear fusion, where hydrogen atoms are fused together to create helium. This process releases a lot of energy, which is what makes stars shine so brightly.

Eventually, all stars will run out of fuel and die. When this happens, smaller stars like our Sun will expand into giant red stars before collapsing into a white dwarf. Larger stars will explode in a massive explosion called a supernova, leaving behind a dense core called a neutron star or even a black hole.

Stars play a crucial role in the universe. They are responsible for creating the elements that make up everything around us, including the Earth and our own bodies. Without stars, life as we know it would not exist.

So next time you look up at the night sky and see the stars twinkling above, remember how truly special and important they are. Stars are not just beautiful to look at – they are also the building blocks of the universe.
