Touching A Nerve Our Brains Our Selves Patricia S Churchland:

Touching a Nerve Patricia Churchland, 2013-07-22 Describes the latest research in human brain function consciousness sensory experience and memory and discusses the ethical and philosophical dilemmas that can result from these new insights

Touching a Nerve Patricia Churchland, 2013-07-15 A trailblazing philosopher's exploration of the latest brain science and its ethical and practical implications What happens when we accept that everything we feel and think stems not from an immaterial spirit but from electrical and chemical activity in our brains In this thought provoking narrative drawn from professional expertise as well as personal life experiences trailblazing neurophilosopher Patricia S Churchland grounds the philosophy of mind in the essential ingredients of biology She reflects with humor on how she came to harmonize science and philosophy the mind and the brain abstract ideals and daily life Offering lucid explanations of the neural workings that underlie identity she reveals how the latest research into consciousness memory and free will can help us reexamine enduring philosophical ethical and spiritual questions What shapes our personalities How do we account for near death experiences How do we make decisions And why do we feel empathy for others Recent scientific discoveries also provide insights into a fascinating range of real world dilemmas for example whether an adolescent can be held responsible for his actions and whether a patient in a coma can be considered a self Churchland appreciates that the brain based understanding of the mind can unnerve even our greatest thinkers At a conference she attended a prominent philosopher cried out I hate the brain I hate the brain But as Churchland shows he need not feel this way Accepting that our brains are the basis of who we are liberates us from the shackles of superstition It allows us to take ourselves seriously as a product of evolved mechanisms past experiences and social influences And it gives us hope that we can fix some grievous conditions and when we cannot we can at least understand them with compassion The Journey Towards Compassionate A.I. Jean-Luc

Mommaerts, 2020-03-06 It may take a few more decades but soon enough A I will turn into super A I This is an artificial intelligence which in all areas of what is now seen as human intelligence approaches this then surpasses it After that it will keep growing exponentially In the meantime at relatively short notice humanity will encounter a challenging A I bi bottleneck 1 humans possibly misusing A I in a big way and 2 A I spiraling into many directions of which any unfortunate one may be enough for disaster Will we control A I or will A I dominate us Let's hope this is the wrong question Because if it's the right question and given enough time there is no shred of a doubt about the answer Still of course we need to give it our best shot not to be dominated by an evil force We should strive for control At the same time transcending the question opens up the domain of Compassion This gradually makes thinking in terms of control and domination in human A I interactions obsolete We will together strive for a better world within an alignment of our values But what are the real human values There are cultural and individual differences Moreover what seem to be anyone's values may be a superficial layer above deeper values which are not necessarily congruent with conscious awareness So the human A I value alignment question will be how to

align what I write in *The Journey* about Compassion as the striving to approach these values in their deeper sense. They can subsequently be realized for each individual in two directions: relief of deep suffering and enhancement of inner growth. Both notions are to be clarified at the individual level. Compassionate A I is the striving towards an A I that can help us to know and to realize ourselves in depth. The beauty is that this way human A I value alignment and further development of A I can intrinsically go hand in hand. Lisa is a software coaching chat bot that is being developed specifically with this goal: helping humans and A I in Compassionate ways to become healthier, stronger, and more effectively Compassionate towards near ones as well as all sentient beings. In this book, super A I is the future kind of A I that may be able but not necessarily to act Compassionately. We don't have to wait for that for Compassionate A I to become important. Already humans can use A I more or less Compassionately. From what point is it relevant as a characteristic of the A I system itself, regardless of how humans use the A I? There is no steep border. Long before super A I, the first systems in which it becomes more pertinent are those in which Compassion is part of the purpose. That is, systems that in communication with users are meant to give an effectively Compassionate experience. To understand where Compassionate A I may be heading towards, we need to understand Compassion. This leads us on a journey starting on the one hand from data and on the other hand from drive to thrive, life itself. On this journey, we encounter many insights about intelligence, consciousness, drive to thrive, non-conscious processing. The end of the journey lies in full Compassion. Hopefully, this is the future for A I as well as humanity.

The Evolutionary Argument against Naturalism Jim Slagle, 2021-06-17 Contemporary discussions in metaphysics, epistemology, and philosophy of mind are dominated by the presupposition of naturalism. Arguing against this established convention, Jim Slagle offers a thorough defence of Alvin Plantinga's Evolutionary Argument against Naturalism (EAAN) and in doing so reveals how it shows that evolution and naturalism are incompatible. Charting the development of Plantinga's argument, Slagle asserts that the probability of our cognitive faculties reliably producing true beliefs is low if ontological naturalism is true and therefore all other beliefs produced by these faculties, including naturalism itself, are self-defeating. He critiques other well-known epistemological approaches, including those of Descartes and Quine, and deftly counters the many objections against the EAAN to conclude that metaphysical naturalism should be rejected on the grounds of self-defeat. By situating Plantinga's argument within a wider context and showing that science and evolution cannot entail naturalism, Slagle renders this most common metaphysical view irrational. As such, the book advocates an important reconsideration of contemporary thought at the intersection of philosophy, science, and religion.

The Voice of Public Theology Ted Peters, 2022-11-07 Public theologians are already thundering like prophets at climate change and racial injustice. But the gale force winds of natural science blow through society as well. The public theologian should be on storm watch.

Sin Boldly! Ted Peters,Martin E. Marty,2015 Can faith as trusting God make a difference Absolutely by relieving our anxiety over self justification and the

need to scapegoat others When we discover we don't justify ourselves because God has justified us we become free What Sin Boldly points to is the presence of the crucified and living Christ in the human soul placed there by the Holy Spirit And this becomes transformative Sin Boldly provides an experiential analysis of the contrast between self justification and justification by God Those among us with fragile souls are anxious and we shore up our anxiety with walls of self justification that victimize those whom we scapegoat Those among us with broken souls have lost the very moral universe that makes any kind of justification possible and this usually leads to anomie and suicide We must pose the question how can the gospel of grace provide transformation for both fragile and broken souls After an exposition of the Joint Declaration on the Doctrine of Justification this book proposes the following answer trusting in the God of grace relieves anxiety and provides a divine vocation that transcends our moral universe with the promise of forgiveness renewal and resurrection *Interactive World, Interactive God* Carol Rausch Albright, John R. Albright, Mladen Turk, 2017-11-06 Since the dawn of science ideas about the relation between science and religion have always depended on what else is going on in a society During the twentieth century daily life changed dramatically Technology revolutionized transportation agriculture communications and housework People came to rely on scientific predictability in their technology Many wondered whether God's supposed actions were consistent with scientific knowledge The twenty first century is bringing new scientific research capabilities They are revealing that scientific results are not totally predictable after all Certain types of interaction lead to outcomes that are unpredictable in principle These in turn may lead to a whole new range of potential interactions They do not rule out the reality of a dynamic God who can act in the world without breaking the known principles of science God may in fact work with the way things really are Human experience of God may accurately reflect this reality *Interactive World Interactive God* illustrates such new understandings in religion and science by describing recent developments in a wide range of sciences and providing theological commentary The book is written for intelligent readers who may not be specialized in science but who are looking for ways to understand divine action in today's world *The Routledge Handbook of Classics and Cognitive Theory* Peter Meineck, William Michael Short, Jennifer Devereaux, 2018-11-21 *The Routledge Handbook of Classics and Cognitive Theory* is an interdisciplinary volume that examines the application of cognitive theory to the study of the classical world across several interrelated areas including linguistics literary theory social practices performance artificial intelligence and archaeology With contributions from a diverse group of international scholars working in this exciting new area the volume explores the processes of the mind drawing from research in psychology philosophy neuroscience and anthropology and interrogates the implications of these new approaches for the study of the ancient world Topics covered in this wide ranging collection include cognitive linguistics applied to Homeric and early Greek texts Roman cultural semantics linguistic embodiment in Latin literature group identities in Greek lyric cognitive dissonance in historiography kinesthetic empathy in Sappho artificial intelligence in Hesiod and Greek drama the enactivism of Roman statues and memory and art in the Roman

Crossing a Chasm Wayne Talbot, 2021-03-11 The author started his working career as an Air Traffic Control Officer in the Royal Australian Air Force and after resigning his commission spent thirty five years in the Information Services industry In the context of his writings he describes himself as an analyst by aspiration inclination proclivity training and occupation His books reflect his primary intellectual pursuit explanations given for human existence by both religions and evolution Having published several analyses including Religion Of God or Man and Seeking After God he concluded that there was nothing more that he could learn on that subject the issue remained an enduring mystery Returning to the other explanation evolution he had long wanted to complete a more thorough analysis of evolution theory than as presented in his earlier publications The Dawkins Deficiency and Information Knowledge Evolution and Self This required that he acquire and study dozens of academic books and other publications seeking to understand the plausibility and at times hollowness of scientific explanations Using his background knowledge of relevant technologies he was able to identify parallels between modern automation and mechanisation and human biological processes One of particular interest was an analysis of the technical similarities between the human sensory system and modern telemetry systems With a lifelong passion for a travel and a modest appetite for adventure he has trekked in the Khumbu and Annapurna regions of Nepal the Peruvian Andes and Patagonia His hobby apart from writing has been a love of all things motorcycling from touring remote areas and attending races to complete restoration of vintage motorcycles He has motorcycled throughout parts of his native Australia North America New Zealand Iceland Bolivia Peru Turkey the Himalaya Morocco Greece and eastern Europe His business and holiday travels have taken him through sixty countries and all

continents including Antarctica Evolution is defined as the change in the heritable characteristics of biological populations over successive generations resulting in changes in both the genotype and phenotype The evidence for evolution is primarily circumstantial being based on fossils of extinct species physical similarities and a largely common genome Charles Darwin believed that all species of organisms arise and develop through the natural selection of small inherited variations that increase the individual's ability to compete survive and reproduce Today we know so much more than Darwin did 150 years ago leading many scientists to discard genetic mutation and natural selection as having the development power previously ascribed to them What has been missing in the science so far is systems thinking a holistic approach to analysis that focuses on the way that a system's constituent parts interrelate and how systems work over time and within the context of larger systems Questioning whether the mind consists of organs of the brain an emergent property of the brain or activities of the brain as scientists suggest the author has concluded for none of these The brain being physical it can only deal with the physical but the mind deals in the conceptual which has no physical properties With his background in related technologies the author has compared the human nervous system with telemetry systems as used in modern aircraft vehicles and other applications Though implemented differently the functional requirements remain the same which has prompted a different perspective on how it could have evolved The telemetry system in the human body is astounding in its complexity accuracy and reliability leading to the author's doubts as to its claimed evolutionary origins Crossing a Chasm is an analysis of the probability that such could be accomplished by innumerable unguided small steps over whatever time

Die Zukunft der Seele Elis Eichener, 2022-04-19 Viele Menschen glauben an die Seele aber die wissenschaftliche Theologie hat zu ihr ein distanziertes Verhältnis Stand der Seelenbegriffe Jahrhunderte im Mittelpunkt christlichen Denkens ist er vor allem im Laufe des 20. Jahrhunderts in die Kritik geraten Für die Seelsorge die explizit auf die Seele rekurriert liegt darin ein Problem Durch die Skepsis gegenüber der Seelenvorstellung ist nicht nur unklar geworden was der Gegenstand der Seelsorge ist Auch wurde dadurch die theologische Sprachfähigkeit in der Praxis herausgefordert insbesondere in der Trauerbegleitung Diese Studie fragt deshalb im interdisziplinären Gespräch danach wie der Seelenbegriff unter gegenwärtigen geistesgeschichtlichen Bedingungen für die Seelsorge re-plausibilisiert werden kann The Future of the Soul A Poimenic Rereading of the Concept of the Soul Many people believe in the soul though scientific theology has a distanced relationship towards it While the concept of the soul has been at the centre of Christian thought for centuries it has come under critique especially over the course of the 20th century This poses a problem for pastoral care which explicitly refers to the soul Scepticism about the concept of the soul has not only obscured what the object of pastoral care is but also challenged the capacity of theological language in practice especially in grief counselling This study thus asks within an interdisciplinary framework how the concept of the soul can be made plausible again for pastoral care under the contemporary conditions of our intellectual history

Visual Alterity Randall Halle, 2021-03-30 Reconsidering the dynamics of perception Using cinema to explore the visual aspects of

alterity Randall Halle analyzes how we become cognizant of each other and how we perceive and judge another person in a visual field Halle draws on insights from philosophy and recent developments in cognitive and neuroscience to argue that there is no pure natural sight We always see in a particular way from a particular vantage point and through a specific apparatus and Halle shows how human beings have used cinema to experiment with the apparatus of seeing for over a century Visual alterity goes beyond seeing difference to being conscious of how one sees difference Investigating the process allows us to move from mere perception to apperception or conscious perception Innovative and insightful Visual Alterity merges film theory with philosophy and cutting edge science to propose new ways of perceiving and knowing Neuromatic John Lardas Modern, 2021-09-29 The story Modern tells ranges from eighteenth century brain anatomies to the MRI from the spread of phrenological cabinets and mental pieties in the nineteenth century to the discovery of the motor cortex and the emergence of the brain wave as a measurable manifestation of cognition from cybernetic research into neural networks and artificial intelligence to the founding of brain centric religious organizations such as Scientology from the deployments of cognitive paradigms in electric shock treatment to the work of Barbara Brown a neurofeedback pioneer who promoted the practice of controlling one's own brainwaves in the 1970s What Modern reveals via this grand tour is that our ostensibly secular turn to the brain is bound up at every turn with the religion it discounts ignores or actively dismisses Nowhere are science and religion closer than when they try to exclude each other at their own peril
