Prophecy, Behaviour and Change Gerald G. Smale, 2019-03-04 Professional helpers may harm their clients instead of helping them This is one of the important implications for the selection training and practice of members of the helping professions of the evidence reviewed in this book Originally published in 1977 Gerald Smale argues that the expectations of the professional helper whether social worker doctor psychiatrist psychoanalyst psychotherapist or counsellor can act as self fulfilling prophecies on his or her clients for better or worse In order to suggest how the expectations of the helper might operate the author examines a three stage model of self fulfilling prophecies The stages are the prophecy behaviour based upon the prophecy the outcome brought about by the behaviour Extensive evidence

from the fields of experimenter bias hypnosis and placebo medicine psychotherapy casework and counselling research is reviewed and related to the model and the relationship between this analysis and labelling theory is discussed The book demonstrates that it is the behaviour of the worker towards the client which is of crucial importance and proposes that the client's future and his or her personal strengths should be an important focus of the helping relationship Finally it outlines the dangers of negative expectations and emphasises the ways in which expectations can be used to optimum effect
