

SKIN AND BODY MEMBRANES

Body membranes, which cover body surfaces, line its cavities, and form protective sheets around organs, fall into two major categories. These are epithelial membranes (skin, epidermis, mucosae, and serosae) and the connective tissue synovial membranes.

Topics for review in this chapter include a comparison of structure and function of various membranes, anatomical characteristics of the skin (composed of the connective tissue dermis and the epidermis) and its derivatives, and the manner in which the skin responds to both internal and external stimuli to protect the body.

CLASSIFICATION OF BODY MEMBRANES

1. Complete the following table relating to body membranes. Enter your responses in the areas left blank.

Membrane	Tissue type (epithelial/connective)	Common locations	Functions
Mucous	Epithelial	Cavities → exposed	Moisten Surface
Serous	Epithelial	Cavities → internal	Moisten Surface
Cutaneous	Epithelial	Skin	Protection
Synovial	Connective	Joints	Lubrication

Skin And Body Membranes Coloring Workbook:

Physiology Coloring Workbook Kenneth Axen, Kathleen Vermitsky Axen, 1997 *Physiology Coloring Workbook* is a breakthrough approach to learning and remembering the body's processes. Written and illustrated by experts who are both research scientists and teachers, it features 250 striking original illustrations that will give students a clear and enduring understanding of physiology. Learning interactively through coloring thoroughly fixes physiological concepts in the mind and takes less time than memorizing from textbooks. Physiological processes are fully explained and complex subjects are approached through the gradual introduction of simple drawings. The authors employ a logical and consistent use of color to convey information; for example, arterial blood is always red, whereas venous blood is blue and capillary blood is violet. Each lesson includes clearly displayed labels and specific coloring instructions. This book is an invaluable and lasting resource for students in disciplines including anatomy and physiology, biology, nursing, physical therapy, and rehabilitation, medical technology, nutrition, physical education, allied health, and health sciences. The 250 plates in the book are organized in the following sections: Homeostasis, The Cell, Transport Mechanisms, Nervous System, Muscle, Cardiovascular System, Renal System, Respiratory System, Gastrointestinal System, Metabolism, Endocrine System, Reproduction. McMurtrie's Human Anatomy Coloring Book Hogan McMurtrie, 2006 Each year thousands of students studying to be doctors, physical therapists, and medical technicians have to master the art of anatomy, and an equal number of artists want to capture realistic movement and posture. What better way to remember each bone, muscle, and organ than by coloring a picture? The very act of drawing entices the student to spend more time with the image and to examine the body's structure more closely. That's why this one-of-a-kind coloring book, with its concisely written text and easy-to-color-in medical illustrations, has always been such a huge seller, and why it's now revised into this new user-friendly format. Arranged according to body systems, the color key organization links anatomical terminology to the more than 1,000 precise and detailed black and white illustrations. Readers will also appreciate the sleek lay-flat design, cardboard insert to place under the page for easy drawing, and high-quality paper that makes doing the work simpler and more pleasurable. *Human Anatomy & Physiology Coloring Workbook* Anderson, 2008-04-25 This valuable student resource is intended for use in the undergraduate human anatomy and physiology class. The latest edition of *Human Anatomy and Physiology Coloring Workbook* is designed to help students learn introductory anatomy and physiology and is organized to complement the leading texts in the field. Virtually every structure of the human body typically studied in an introductory course is examined. Chapters are short, concise, and complete, enabling the student to master smaller sections of information in a cohesive manner. 2009, 292 pages. The Massage Connection Kalyani Premkumar, 2004 This textbook is focused on the anatomy and physiology needs of massage therapy students and practitioners. It gives extensive coverage of the major body systems: integumentary, skeletal, muscular, and nervous, crucial for massage therapy. It also provides an overview of other body systems so students have a well-rounded understanding of
