Anterior Hip Replacement Joel M. Matta, Alexander P. Sah, 2022-05-11 Anterior hip replacement is a surgical approach that has dramatically changed the landscape of modern hip replacement The approach is common to orthopedic trauma surgery but it has been rapidly adopted in recent years for hip replacement as well Its proposed benefits as a muscle sparing surgery include less tissue trauma faster recovery and fewer hip precautions While the technique can be challenging during initial learning and early adoption the approach continues to increase in utilization in the U S every year because of these benefits Understanding the initial development of the anterior surgical approach for hip replacement creates the foundation to better understand its modern clinical benefits and possibilities with advanced techniques Furthermore a detailed description of the reasoning behind the continued developments of the anterior approach helps in understanding the key elements needed to obtain the most successful outcomes With the continued adoption of this technically challenging technique there is a need for a comprehensive resource for newly adopting surgeons and surgeons in training but also for experienced surgeons looking to enhance their skill sets Written by experts in the field this book presents the tips and tricks learned after years of experience by a wide spectrum of surgeons Parts 1 and 2 describe the origin and background of the anterior approach for hip replacement with early lessons learned important tips when training others and how to master the operating table and C-arm Parts 3 and 4 cover hip biomechanics and variations on techniques and technologies respectively while part 5 is a unique compilation of surgeons perspectives on managing common aspects of the approach Revision surgery is described in part 6 and future directions for the technique are discussed in part 7 along with emerging navigation and

technologies Every year there is an increasing number of orthopedic surgeons learning and adopting the anterior hip approach who would benefit from the resources in this book which will serve as a critical learning tool for training surgeons and also as the go to reference for optimizing current use and advancing future possibilities of the approach

Quality Spine Care John Ratliff, Todd J. Albert, Joseph Cheng, Jack Knightly, 2018-10-26 Quality reporting is a rapidly growing area Each year new regulations in the US from the Council of Medicare and Medicaid Services make quality reporting a larger factor in determining reimbursement practices Quality metrics are common parts of European clinical practice Value of care is a focus of all payers with specific interest directed at assessing the quality of care provided by a given healthcare team While there are many publications in this space no text has sought to provide an overview of quality in spine care Quality measurement and quality reporting are ever growing aspects of the healthcare environment Quality assessment is valuable to all healthcare stakeholders patients physicians facilities and payers Patients are drawn to facilities that provide high value care public reporting systems and grading systems for hospitals offer one opinion with regard to high quality care Most physicians email inboxes are inundated with offers of recognition for being a Top Doc for a nominal fee Some payers offer incentives to patients who chose to be treated at Centers of Excellence or similar facilities the definition of Excellence may be unclear There is little consensus on how to measure quality how to incorporate patient and procedure factors and achieve accurate risk adjustment and how to define value of care Regardless of these challenges regulatory efforts in the US as well as numerous international efforts make quality assessment and quality reporting an important part of physician behaviour Physician and facility reimbursement for procedures are often tied to quality metrics Spine procedures are costly elective and are a focus of many payer based programs Hence spine care is often a focus of quality reporting efforts This text summarizes the state of the art with regard to quality measurement reporting and value assessment in spine care We will review quality reporting in the US and internationally Chapters will outline how quality improvement efforts have achieved success in hospital systems The reader will be provided with insights in how to achieve success incorporating quality metrics into spine care

Features

- 2 Provides insight on quality reporting in different healthcare systems The text will allow for comparison of different quality reporting systems from different health care systems This will provide practitioners with insight into the strengths and weaknesses of different approaches to quality reporting and may drive improvement in quality assessment and reporting systems A single text that features review of US European and Australia Asian health care systems quality reporting is novel and will be thought provoking for readers
- 3 Describes the US and international Healthcare reimbursement systems Practicing physicians are provided with little information and less insight

into the vagaries of the US and other healthcare systems The text will provide insight into code development valuation and how quality reporting affects physician reimbursement 4 Explains risk adjustment Appropriate risk adjustment and assessing patient and procedure factors that may impact quality reporting are invaluable to accurate quality measurement The text will review risk adjustment different approaches to risk assessment mitigation and provide physicians with insights into appropriate measures to capture in their clinical practices 5 Provides a foundation for improved quality assessment in spine care While there are many disparate elements and differing approaches to capturing spine quality metrics no definitive text has attempted to summarize these efforts in a single volume By synthesizing these variable approaches the reader may be provided with insights into superior approaches to quality assessment and a foundation will be provided for improving healthcare systems
