

A special indicator can be used to measure the position of the Robert Bosch VE pump plunger to check pump timing (refer to page 4-43).

Correct timing of the Lucas CAV DPA pump can be verified by removing the inspection plate.

**Note:** Special equipment in an authorized shop is required to precisely time the Lucas CAV DPA pump. However, for trouble-shooting and in an emergency, visual alignment of the timing mark is close enough for the engine to run.

Both of these checks are described in the injection pump replacement discussion. Installation of the timing pin housing is described in the Base Engine Components Section.

#### High Pressure Fuel Lines

**Caution:** The high pressure lines must be clamped securely and routed so they do not contact each other or any other component.

The high pressure fuel lines are designed and manufactured to deliver fuel at injection pressure to the injectors. The high pressure pulses will cause the lines to expand and contract during the injection cycle.

**Caution:** Do not weld or substitute lines; use only the specified part number for the engine.

The length, internal size and rigidity of the lines is critical to smooth engine operation. An attached metal tag is used to identify each line with a part number.
