Research Questions in

Language Education and Applied Linguistics Hassan Mohebbi, Christine Coombe, 2022-01-13 This volume encompasses the range of research questions on language related problems that arise in language teaching learning and assessment The 150 chapters are written by experts in the field who each offer their insights into current and future directions of research and who suggest several highly relevant research questions Topics include but are not limited to language skills teaching language skills assessment and testing measurement feedback discourse analysis pragmatics semantics language learning through technology CALL MALL ESP EAP ERPP TBLT materials development genre analysis needs analysis corpus content based language teaching language teaching and learning strategies individual differences research methods classroom research form focused instruction age effects literacy proficiency and teacher education and teacher development The book serves as a reference and offers inspiration to researchers and students in language education An important skill in

reviewing the research literature is following a study's plan of attack. Broadly this means that before accepting and acting upon the findings one considers a) the research question. Is it clear and focused? Measurable? b) the subjects examined, the methods deployed and the measures chosen. Do they fit the study's goal and have the potential to yield useful results? and c) the analysis of the data. Do the data lead to the discussion presented? Has the author reasonably interpreted results to reach the conclusion? Mohebbi and Coombe's book *Research Questions in Language Education and Applied Linguistics: A Reference Guide* helps budding researchers take the first step and develop a solid research question. As the field of language education evolves, we need continual research to improve our instructional and assessment practices and our understanding of the learners' language learning processes. This book, with its remarkable 150 topics and 10 times the number of potential research questions, provides a wealth of ideas that will help early career researchers conduct studies that move our field forward and grow our knowledge base. Deborah J. Short, Ph.D., Director, Academic Language Research Training, Past President, TESOL International Association, 2021-22. As a teacher in graduate programs in TESOL, I frequently come across the frustration of students at centering their research interests on a particular topic and developing research questions which are worth pursuing so as to make a contribution to the field. This frustration stems from the fact that our field is so vast and interrelated that it is often impossible to properly address all that interests them. Hence, I wholeheartedly welcome this most relevant and innovative addition to the research literature in the field of TESOL and Applied Linguistics. Coombe and Mohebbi have created a real tour de force that stands to inform budding researchers in the field for many years to come. Additionally, the cutting edge depiction of the field and all it has to offer will, no doubt, update the research agendas of many seasoned researchers around the world. The 150 chapters are organized in a most powerful yet deceptively simple way, offering a positioning within the topic, suggesting questions that might direct inquiry and offering a basic set of bibliographic tools to start the reader in the path towards research. What is more, the nine sections in which the chapters are organized leave no area of the field unexplored. Dr. Gabriel Díaz Maggioli, Academic Advisor, Institute of Education, Universidad ORT del Uruguay, President, IATEFL Chapter, Metacognition in Academic Writing, Learning Dimensions, is available open access under a Creative Commons Attribution 4.0 International License via link.springer.com. *Teaching Science Online*, Dietmar Kennepohl, 2023-07-03. With the increasing focus on science education, growing attention is being paid to how science is taught. Educators in science and science-related disciplines are recognizing that distance delivery opens up new opportunities for delivering information, providing interactivity, collaborative opportunities and feedback, as well as for increasing access for students. This book presents the guidance of expert science educators from the US and from around the globe. They describe key concepts, delivery modes and emerging technologies and offer models of practice. The book places particular emphasis on experimentation, lab and field work as they are fundamentally part of the education in most scientific disciplines. Chapters include Discipline methodology and teaching strategies in the specific areas of physics, biology, chemistry,

and earth sciences An overview of the important and appropriate learning technologies ICTs for each major science Best practices for establishing and maintaining a successful course online Insights and tips for handling practical components like laboratories and field work Coverage of breaking topics including MOOCs learning analytics open educational resources and m learning Strategies for engaging your students online
