

(d) We have,
$$\begin{bmatrix} 1 & 1 & 1 \\ 1 & -2 & -2 \\ 1 & 3 & 1 \end{bmatrix} \begin{bmatrix} x \\ y \\ z \end{bmatrix} = \begin{bmatrix} 0 \\ 3 \\ 4 \end{bmatrix}$$

$$x + y + z = 0 \quad \text{.....(i)}$$

$$x - 2y - 2z = 3 \quad \text{.....(ii)}$$

$$x + 3y + z = 4 \quad \text{.....(iii)}$$

On solving $x = 1, y = 2, z = -3$ i.e., $\begin{bmatrix} 1 \\ 2 \\ -3 \end{bmatrix}$.

Paul Moritz Cohn

Solving Linear Equations By Matrices Tesccc:

Linear Equations P. M. Cohn, 2012-12-06 LINEAR equations play an important part not only in mathematics itself but also in many fields in which mathematics is used Whether we deal with elastic deformations or electrical networks the flutter of aeroplane wings or the estimation of errors by the method of least squares at some stage in the calculation we encounter a system of linear equations In each case the problem of solving the equations is the same and it is with the mathematical treatment of this question that this book is concerned By meeting the problem in its pure state the reader will gain an insight which it is hoped will help him when he comes to apply it to his field of work The actual process of setting up the equations and of interpreting the solution is one which more properly belongs to that field and in any case is a problem of a different nature altogether So we need not concern ourselves with it here and are able to concentrate on the mathematical aspect of the situation The most important tools for handling linear equations are vectors and matrices and their basic properties are developed in separate chapters The method by which the nature of the solution is described is one which leads immediately to a solution in practical cases and it is a method frequently adopted when solving problems by mechanical or electronic computers

Matrices Pam Norton, 2007 This book provides mathematics teachers with an elementary introduction to matrix algebra and its uses in formulating and solving practical problems solving systems of linear equations representing combinations of affine including linear transformations of the plane and modelling finite state Markov chains

Linear Equations and Matrices John B. Johnston, Griffith Baley Price, Fred S. Van Vleck, 1966

Unit LA2 Open University, Open University Course Team, 2006-03-04 Systems of simultaneous linear equations arise frequently in mathematics and in many other areas This unit begins by considering simultaneous linear equations in two and three unknowns introduces the idea of a solution set and interprets the results geometrically The method of Gauss Jordan elimination is introduced and a strategy for solving systems of linear equations based on performing elementary row operations on the augmented matrix of a system is developed The algebra of matrices is studied and the inverse of a matrix introduced One subsection is intended to be studied in conjunction with an audio available in the Linear Algebra Block Pack order code M208 MMPLA
