INTRODUCTION

You have purchased the finest weather-resistant speakers available. Your new Mariner-Series speakers are carefully designed to give you years of trouble-free listening. Unlike many "outdoor" speakers, Sonance Mariner-Series are designed to sound terrific indoors as well. Please take a few minutes to read the complete instructions before you begin your wiring.

ASSEMBLY:

The Sonance Mariner 300, 200 and 100 speakers include a patent pending multi-axis pivot bracket, which includes: two bracket knobs, one mounting screw, one "banana" shape bracket, one gasket, and one base. Please see Diagram 1 for assembly.

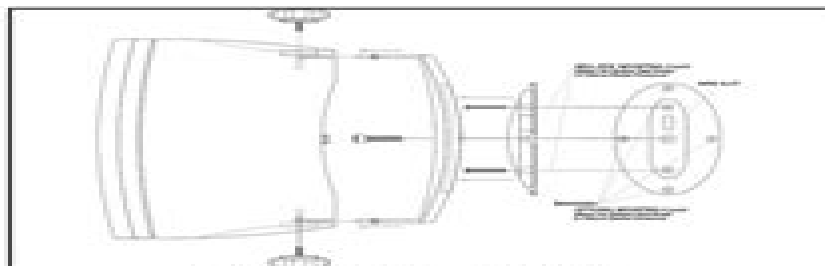

Diagram 1. Speaker Assembly

PLACEMENT:

The Sonance Mariner 300, 200 and 100 speakers are designed for those areas around your home where placement of speakers in the wall or ceiling is not practical, possible, or desirable. They are particularly well suited for outdoor use, even in locations that are unprotected from the elements (e.g., on deck rails, patios, in gardens and pool areas). Other applications might include indoor areas where a quality bookshelf speaker would be perfect for music listening or home theater. The Mariner 300 and Mariner 200 are video-shielded for use in close proximity to TV sets or computer monitors.

INDOOR PLACEMENT:

The Mariner-Series speakers are designed for outstanding performance indoors or out. Indoor set up can be accomplished by setting the speakers on a bookshelf or cabinet top, balancing them on a dedicated speaker stand or by attaching them to a wall using the integrated bracket system.

Shelf mounting

Place the speakers on a shelf at ear level. For a seated listener this will be about 40" from the floor. If the speakers must be setup higher or lower, consider tilting them to focus the sound into the listening area. The distance between the speakers will depend upon the layout of your music or home theater system. As a rule, the distance between the left and right speakers should be the same or slightly less than the distance from the speakers to the listening area.

INSTALLATION INSTRUCTIONS

SONANCE MARINER 300/200/100

INDOOR/OUTDOOR SPEAKERS

Wall mounting

The speakers should be located on the left and right in front of the listener, at approximately ear level. The left-right distance between the speakers should be the same or slightly less than the distance from the speakers to the listening area.

If placement above ear level is desired (e.g., on the ceiling or high on the wall), aim them toward the primary listening area. All Mariner-Series models feature an integrated pivoting bracket that will allow it to be tilted along two axis for a wide variety of placement options (Diagram 2).

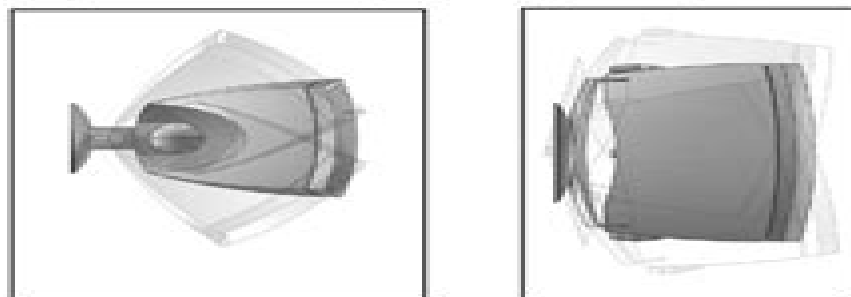

Diagram 2. Tilt and Rotation Adjustments

OUTDOOR PLACEMENT:

All Mariner-Series speakers are highly water resistant. They will perform exceptionally well for years even under adverse weather conditions.

WIRING:

IMPORTANT: Do not attempt to connect speakers to any source (amplifier, receiver) that is turned on. Check to be sure that the amplifier designated to power the speakers is off before attempting connection.

Always use high grade (Sonance MediaLineQ) speaker wire. We recommend 18-GA wire for runs of less than 50 feet, 16-GA for runs of 50-100 feet, 14-GA for runs over 100 feet.

1. Strip 1/4" of insulation from the ends of the speaker wire that will be connected to the speakers. The 5-way binding posts on the backs of the speakers will accept up to 14-GA wire. You can connect the stripped wire directly to the posts by inserting it through the small hole in the center of the post then tightening the black and red nuts. As an alternative, you can attach the wire to a banana plug which will plug directly into the 5-way post. A third alternative is to solder a spade lug onto the end of each speaker wire and tighten the black and red nuts tightly to hold it in place. This would be the most weather resistant option.

2. With your amplifier off, connect the positive (+), or red, terminal of your amplifier to the positive (+) terminal of one speaker. Connect the negative (-), or black, terminal of your amplifier to the negative (-) terminal of the speaker.

3. Repeat step 2 with the other speaker, making sure the left and right channel of your amplifier are connected to your left and right speaker, respectively.
