*Key Technology*

Full HD 1080p There are a lot of ways to define high-definition but BRAVIA® Full HD means you're getting the best resolution that high-definition has to offer consumers. With Sony BRAVIA XBR HDTVs, Full HD 1080 means 1920 x 1080 pixels³ and 1080p video inputs. Near Midsize demands the best in high-definition and with BRAVIA Full HD 1080 products you get it.

1920 x 1080 Native Panel Resolution When it comes to high-definition TV the pinnacle of performance is achieved by using 1920 x 1080 display panels. Full HD 1080 x 1080 panel resolution with over 2 million pixels⁴ means more than twice that of 1280p HDTV resolution when you need to reproduce fine 1080p content that can be delivered by our cutting-edge 1080p Blu-ray Disc™ player.

10-bit Pixel sensing and 10-bit images While it's great to state that a TV is capable of creating billions of colors it's a whole lot better when you have a display that can actually display them. That's the logic behind Sony's 10-bit processor and 10-bit display. Sony follows 10-bit processing with a 10-bit panel, allowing it to sense the levels of color reproduction that a 10-bit panel should show. Translating it to another technology from color to color and subtle color changes faithfully reproduced.

Motionflow™ 120 Hz with Full HD high frame rate panel is a reality. Taking motion performance to the next level requires innovation and ingenuity. Enter Sony's Motionflow™ High Frame Rate technology. Motionflow™ starts at the incoming video signal and applies the appropriate processing for optimum motion reproduction. Taking full advantage of the source's 24fps encoded content available on DVD and Blu-ray Disc, Motionflow™ allows the viewer the best for LCD panels and screen inserts, sudden fast action, fast stills preserving the integrity of the original film. When 60fps content is detected, Motionflow™ adjusts the amount of frame and uses near-end calculation to create a new level of natural motion reproduction. Don't experience movies and sports with a greater sense of motion than ever before.

BRAVIA Engine™ PRO Full Digital Video Processor BRAVIA Engine™ PRO builds upon the BRAVIA Engine system's outstanding video processing functions making it Sony's most advanced video processing system. It is the culmination of our legendary picture quality expertise. Merging the latest generation of proprietary video processing technology: Digital Reality Creation™, Multi-Frame Buffer (MFC-MFB), TruMotion™ creates a high definition video signal that traditional televisions have never processed. A multi-effective. This latest generation of DRC-MFB features increased processing power and provides a sharp, crystal clear image with both 480p and 480p standard definition and all high definition content (up to and including 1080p). It also features "1080p Direct Creation" which minimizes loss in interface processing. It's a combination of pre-rendering Digital Reality Creation and MFC-MFB algorithms available only.

Live Color Creation™ System featuring WCG-CCFL Many colors in the real-world such as deep reds, greens and other colors cannot be created by engineering with conventional display technology. Working in a synergy with the input of MFC-MFB technology in 10-bit HDTVs, the optical engine in our MDR HDTVs, Live Color Creation technology achieves wide color reproduction using advanced chroma signal processing systems. The primary benefits are color tones, natural greens and a overall wider color gamut for all scenes.

Advanced Contrast Enhancer (ACE) Function Sony's Active to go input for video on DRC is a video processing system that enhances performance to a 10-bit 1080p 120 Hz panel. Capable of up to 15,000:1 contrast, by using real-time image processing to adjust the contrast along with reproducing the light levels. But it's not just about the contrast. The ACE technology also enhances performance by enhancing the contrast level to enhance detail and low level ACE technology to take care of the contrast level, as well as further enhance detail and contrast to give the difference that you can see.

RealColor™ technology BRAVIA® HDTV's performance has been called out for the most realistic color reproduction and defined by standards in the industry. Sony's RealColor™ technology is the only technology that can reproduce colors as they appear in the real world. The color is the color as it is in the real world. The color is the color as it is in the real world. The color is the color as it is in the real world.
