focuses on children's learning and development in mathematics in the critical reception year. It supports trainee teachers and early years students to reflect on their own mathematics learning and how this influences their teaching and subject confidence. It acknowledges the uniqueness of the early years and explores the mathematical pedagogies of the EYFS. Importantly, the book challenges the assumption that early years mathematics is not proper maths. *Imagine Math 8* Michele Emmer, Marco Abate, 2022-09-07. This eighth volume of *Imagine Math* is different from all the previous ones. The reason is very clear: in the last two years, the world changed and we still do not know what the world of tomorrow will look like. Difficult to make predictions. This volume has a subtitle: *Dreaming Venice*. Venice, the dream city of dreams, that miraculous image of a city on water that resisted for hundreds of years, has become in the last two years truly unreachable. Many things tie this book to the previous ones. Once again, this volume also starts like *Imagine Math 7* with a homage to the Italian artist Mimmo Paladino, who created exclusively for the *Imagine Math 8* volume a new series of ten original and unique works of art dedicated to Piero della Francesca. Many artists, art historians, designers, and musicians are involved in the new book, including Linda D. Henderson and Marco Pierini. Claudio Ambrosini and Davide Amodio also contribute with comics and mathematics in a Disney key. Many applications, from Origami to mathematical models for world hunger. Particular attention to classical and modern architecture with Tullia Iori. As usual, the topics are treated in a way that is rigorous but captivating, detailed and full of evocations. This is an all-embracing look at the world of mathematics and culture. *Math Instruction for Students with Learning Difficulties* Susan Perry Gurganus, 2021-11-29. This richly updated third edition of *Math Instruction for Students with Learning Difficulties* presents a research-based approach to mathematics instruction designed to build confidence and competence in preservice and inservice PreK-12 teachers. Referencing benchmarks of both the National Council of Teachers of Mathematics and Common Core State Standards for Mathematics, this essential text addresses teacher and student attitudes towards mathematics as well as language issues, specific mathematics disabilities, prior experiences, and cognitive and metacognitive factors. Chapters on assessment and instruction precede strands that focus on critical concepts. Replete with suggestions for class activities and field extensions, the new edition features current research across topics and an innovative thread throughout chapters and strands: multi-tiered systems of support as they apply to mathematics instruction. **Ethnomathematics and Mathematics Education** Cynthia Nicol, Gelsa Knijnik, Aihui Peng, Marcos Cherinda, Arindam Bose, 2024-07-16. This edited volume examines ethnomathematics conceptions, pedagogical practices, and research from international perspectives in times of local and global challenges. The book explores connections between mathematical, cultural, political, and social practices toward more inclusive, holistic, creative, transdisciplinary, and critical ways of engaging with knowledge and mathematical actions in society. In this edited book, the authors explore how ethnomathematics supports transformation of educational systems toward regaining cultural reclamation and self-confidence, challenges colonial logics for decolonizing and Indigenizing mathematics education, and engages with actions for critical and
