

Stem Cell Research

Stem cell research is research that is used to determine what cells form an organism. Through technological advances over the decades, it has become extremely easy for scientists and biologists to go through research in search of answers. The origin and development of stem cell research has elicited different reactions from many quarters. It has come to be known over the years as the stem cell research controversy. Many people do not agree with the research carried out on different organism cells (Pollack, 2012). It has been a debate that covers the treatment, creation, and destruction of human embryos. Stem cells play an intricate part in the development of organisms; hence individuals believe that the manipulation of these cells is wrong. This paper will review the controversy that surrounds stem cell research, and some of the answers given about this controversial subject.

The controversy surrounding stem cell research is the taking of embryonic cells from fetuses in order to get material to study. The most opportune time is after conception, or during the 5th or 9th week. This is the time the fetus can start producing these cells. Biologists then use these cells to study their relation to an organism, or immediate environment. The controversy, therefore, borders on ethical boundaries (Robertson, 2010). People believe that it is unethical to manipulate cells to find out about their properties.

Stem cells are unspecialised cells that can be manipulated into any specialised cells, for example, the brain cells. With these cells, it is possible for scientists to restore, or regenerate cells that are otherwise, dead. It is through this research that this is made possible. Controversy has come up since during the harvesting of these cells there is the destruction of

Lim,2010 This book provides an analysis of the ways in which the BAC has established an ethical framework for biomedical research in Singapore following the launch of the Biomedical Sciences Initiative by the Singapore Government The editors and authors have an intimate knowledge of the working of the BAC and the focus of the book includes the ways in

which international forces have influenced the form and substance of bioethics in Singapore Together the authors offer a comparative account of the institutionalisation of biomedical research ethics in Singapore considered in the wider context of international regulatory efforts The book reviews the work of the BAC by placing it within the broader cultural social and political discourses that have emerged in relation to the life sciences since the turn of the 21st century This book is not primarily intended to be a retrospect or an appraisal of the contribution of the BAC though this is one aspect of it Rather the main intention is to make a substantive contribution to the rapidly emerging field of bioethics Ethical discussions in the book include consideration of stem cell research and cloning genetics and research with human participants and focus on likely future developments as well as the past Many of the contributors of the book have been personally involved in this work and hence they write with an authoritative first hand knowledge that scholars in bioethics and public policy may appreciate As indicated above the book also explains the way in which ethics and science international and local have interacted in a policy setting Scholars and policy makers may find the Singaporean experience to be a valuable resource as the approach has been to make the ethical governance of research in Singapore consistent with international best practice while observing the requirements of a properly localised application of universally accepted principles In addition at least three chapters the first three chapters in particular are accessible to the lay reader interested in the development of bioethics and biomedical sciences both inside and outside Singapore from 2000 the year in which the BAC was established Both scholars and interested lay readers are therefore likely to find this publication a valuable reference
