**No Freedom Without Regulation** Joseph William Singer, 2015-01-01 A tour de force that corrects a  
misconception long embraced by both the left and the right about markets and regulation Almost everyone who follows  
politics or economics agrees on one thing more regulation means less freedom Joseph William Singer one of the world's most  
respected experts on property law explains why this understanding of regulation is simply wrong While analysts as  
ideologically divided as Alan Greenspan and Joseph Stiglitz have framed regulatory questions as a matter of governments  
versus markets Singer reminds us of what we've willfully forgotten government is not inherently opposed to free markets or  
private property but is in fact necessary to their very existence Singer uses the recent subprime crisis to demonstrate  
Regulation's essential importance for freedom and democracy Why consumer protection laws are a basic pillar of economic  
freedom How private property rests on a regulatory infrastructure Why liberals and conservatives actually agree on these  
relationships far more than they disagree This concise volume is essential reading for policy makers philosophers political  
theorists economists and financial professionals on both sides of the aisle

Reconnecting People and Water Liz Sharp,2017-05-18 Water management in industrialised western countries has long been seen as a technical process associated with pipes drains and bureaucracies This technical model of water management is now being questioned This book examines the nature of contemporary water management and the prospects for and

barriers to different forms of engagement with the public In particular it shows how historical and social scientific understandings develop and question current water management norms in relation to water in the landscape water in the home and the hidden management of water beneath our streets and behind our walls It is shown that the four fold challenges of climate change urbanisation changing environmental standards and fiscal accountability mean that we can no longer rely on unseen technical fixes to erase the threats of pollution water shortages and floods Such concerns offer two prompts for public engagement and participation First on a purely instrumental level public engagement can complement or offer an obvious alternative to technical fixes Second public engagement may provide a route to find new ways of addressing water and related challenges The author offers a unique social science perspective on many of the socio technical issues facing the management of water in urban settings in developed countries where urban is interpreted broadly to include all areas served by piped water Drawing on historical context and an extensive review of the published literature as well as the author s own empirical studies the work prompts broader discussions about how we manage water in contemporary society It is invaluable for students and professionals in water resource management and planning
