

Smart Board Setup

Equipment needed:

Smart Board, Overhead, PC Connections, Air Tablet, Windows Desktop, Finger Drive

Overview

- The computer sends an image of an application to the projector.
- The projector casts the image onto the interactive whiteboard.
- The interactive whiteboard acts as both the monitor and input device, allowing you to control any application by touching the screen.

Hardware Basics for Front Projection SMART Board Interactive Whiteboards

The SMART Board™ interactive whiteboard is touch sensitive and operates as part of a system that includes a computer and a projector. It is an input device similar to using a mouse or keyboard device that enables you to control applications on your computer.

The SMART Pen Tray

The SMART Pen Tray consists of four color-coded slots for pens and one slot for the eraser. Each slot has an optical sensor to identify when the pens and eraser have been picked up. You can write with the pen or with your finger, as long as the pen slot is empty. The technology in the pen tray is smart enough to know which tool was removed from its slot most recently.

If you remove the eraser from its slot while you are still holding a pen, the pen tray will assume you want to erase. The lights above the tool slots indicate which tool was removed last.

TIP: If someone accidentally takes a pen or the eraser home, simply cover the optical sensor with a pen lid or a sticky note to continue using your interactive whiteboard until the tool is returned.
