Corporate Carbon and Climate Accounting Stefan Schaltegger, Dimitar Zvezdov, Igor Alvarez Etxeberria, Maria Csutora, Edeltraud Günther, 2016-01-21. This volume is devoted to management accounting approaches for analyzing business benefits and costs of climate change. It discusses future directions on carbon accounting, performance measurement, and reporting, as well as links between climate accounting and business processes, product and service development, supply chain innovation, economic successes, and stakeholder relations. Companies are increasingly called on to contribute to combatting climate change and also face the challenges presented by climate change-related costs, risks, and benefits. Risks can result from unpredictable weather conditions and government regulations such as the EU emission trading system and new building codes. Climate change also offers numerous opportunities such as energy efficiency innovations and carbon neutral products and production. Good management requires that carbon emissions are tracked and climate-related costs, risks, and benefits are identified, measured, and assessed. As such research addressing corporate accounting frameworks and tools is of increasing importance when it comes to managing these carbon and climate-related issues. Cost Accounting Jesse T. Barfield, Raiborn, 1994-01-05.
