Redefining Traffic: How Ai

Leads The Change Guanghui Zhao, 2023-06-28 Advances in Artificial intelligence AI have redefined research and development in many areas particularly in the direction of engineering research application of machine learning and the use of deep learning in many aspects of engineering research This book looks at the impact of AI and how it has transformed transportation in the form of Smart Traffic Management Systems in a world of unmanned systems and autonomous machines The book explores the problems faced in air sea and land transport and traffic It looks into Unmanned Aerial Vehicles UAVs autonomous and remotely operated ships intelligent port management systems and modern urban railway systems Redefining Traffic is a reference book for researchers engineers and technical personnel specializing in intelligent traffic artificial intelligence big data and the Internet of Things IoT It can also be used as a study guide for advanced undergraduates interested in AI vehicle engineering automation and computing

Smart Automotive Mobility Gerrit Meixner, 2020-09-16 This book focuses on smart results in the field of smart automotive mobility concentrating on semi autonomous cars The results are based on 5 recently finished public funded research projects with a budget of over 15 million Euro Providing insights into the next generation of personalized mobility on the road the authors discuss personalized adaptive cooperative systems for highly automated cars and how they can be developed in a human centered way Furthermore the book reports on a cooperative driver vehicle interaction How can the driver and the vehicle support each other What are their best skills and how can they benefit from each other It also gives novel insights on intuitive steering gestures on the steering wheel which initiate maneuvers to be executed by the automation and to be supervised by influenced or interrupted by the driver The book finishes with information on a cooperative laser beam system which improves the communication between the different road participants to optimize the road safety of tomorrow Smart Automotive Mobility Reliable Technology for the Mobile Human is an ideal source for researchers students and practitioners working in the area of intelligent systems for the automotive industry It gives valuable and condensed information from multi million Euro research projects funded by the German Federal Ministry of Education and Research

Connected and Autonomous Vehicles in Smart Cities Hussein T. Mouftah, Melike Erol-Kantarci, Sameh Sorour, 2020-12-17 This book presents a comprehensive coverage of the five fundamental yet intertwined pillars paving the road towards the future of connected autonomous electric vehicles and smart cities The connectivity pillar covers all the latest advancements and various technologies on vehicle to everything V2X communications networking and vehicular cloud computing with special emphasis on their role towards vehicle autonomy and smart cities applications On the other hand the autonomy track focuses on the different efforts to improve vehicle spatiotemporal perception of its surroundings using multiple sensors and different perception technologies Since most of CAVs are expected to run on electric power studies on their electrification technologies satisfaction of their charging demands interactions with the grid and the reliance of these components on their connectivity and autonomy is the third pillar that this book covers On the smart services side the book highlights the game

changing roles CAV will play in future mobility services and intelligent transportation systems The book also details the ground breaking directions exploiting CAVs in broad spectrum of smart cities applications Example of such revolutionary applications are autonomous mobility on demand services with integration to public transit smart homes and buildings The fifth and final pillar involves the illustration of security mechanisms innovative business models market opportunities and societal economic impacts resulting from the soon to be deployed CAVs This book contains an archival collection of top quality cutting edge and multidisciplinary research on connected autonomous electric vehicles and smart cities The book is an authoritative reference for smart city decision makers automotive manufacturers utility operators smart mobility service providers telecom operators communications engineers power engineers vehicle charging providers university professors researchers and students who would like to learn more about the advances in CAEVs connectivity autonomy electrification security and integration into smart cities and intelligent transportation systems Smart Transportation Systems 2020

Xiaobo Qu, Lu Zhen, Robert J. Howlett, Lakhmi C. Jain, 2020-05-30 This book gathers selected papers presented at the KES International Symposium on Smart Transportation Systems KES STS 2020 Modern transportation systems have undergone a rapid transformation in recent years producing a range of technological innovations such as connected vehicles self driving cars electric vehicles Hyperloop and even flying cars and with them fundamental changes in transport systems around the world The book discusses current challenges innovations and breakthroughs in smart transportation systems as well as transport infrastructure modeling safety analysis freeway operations intersection analysis and other related cutting edge topics **HCI in Mobility, Transport, and Automotive Systems.
