many industry luminaries predicted the collapse of the centralized data center and IT structure. In its place would be a more decentralized client server model built upon the Open Systems Interconnect (OSI) networking architecture. However, client server never fully realized all of its promises and OSI floundered. Now instead of client server and OSI we have the Web based model and TCP/IP. Together Web oriented technologies i.e. browsers, web servers, HTML, Java and TCP/IP are completely changing how the enterprise views its network. Instead of serving as primarily an internal utility, the enterprise network is now a vital means of delivering products and services and of tying an enterprise more closely to its customers, partners and suppliers. The impact to the very structure of the enterprise network could not be more profound.
