

Figure 1 illustrates a 16-bit parallel adder-subtractor circuit. The circuit is composed of several key components: a 16-bit parallel adder-subtractor block, a 16-bit parallel register, and a 16-bit parallel output register. The adder-subtractor block takes two 16-bit inputs, A and B, and a 16-bit carry-in input, C, to produce a 16-bit output, Y, and a 16-bit carry-out output, COUT. The register takes the 16-bit output Y and stores it, providing a 16-bit output R. The output register takes the 16-bit output R and produces the final 16-bit output Z. The entire circuit is controlled by a 16-bit parallel control signal, C, which is connected to the carry-in input of the adder-subtractor block and the input of the register. The output of the register is connected to the input of the output register. The circuit is shown in a block diagram style with various logic symbols and connections.
