A Student's Manual for A First Course in General Relativity Robert B. Scott, 2016-01-21 This comprehensive student manual has been designed to accompany the leading textbook by Bernard Schutz *A First Course in General Relativity* and uses detailed solutions cross referenced to several introductory and more advanced textbooks to enable self learners undergraduates and postgraduates to master general relativity through problem solving The perfect accompaniment to Schutz's textbook this manual guides the reader step by step through over 200 exercises with clear easy to follow derivations It provides detailed solutions to almost half of Schutz's exercises and includes 125 brand new supplementary problems that address the subtle points of each chapter It includes a comprehensive index and collects useful mathematical results such as transformation matrices and Christoffel symbols for commonly studied spacetimes in an appendix Supported by an online table categorising exercises a Maple worksheet and an instructors manual this text provides an invaluable resource for all students and instructors using Schutz's textbook

General Relativity Robert M. Wald, 2010-05-15 Wald's book is clearly the first textbook on general relativity with a totally modern point of view and it succeeds very well where others are only partially successful The book includes full discussions of many problems of current interest which are not treated in any extant book and all these matters are considered with perception and understanding S Chandrasekhar *A tour de force lucid straightforward mathematically rigorous exacting in the analysis of the theory in its physical aspect* L P Hughston *Times Higher Education Supplement* Truly excellent A sophisticated text of manageable size that will probably be read by every student of relativity astrophysics and field theory for years to come James W York *Physics Today*

300 Problems in Special and General Relativity Mattias Blennow, Tommy Ohlsson, 2021-12-09 Einstein's theories of special relativity and general relativity form a core part of today's undergraduate or Masters level physics curriculum This is a supplementary problem book or student's manual consisting of 150 problems in each of special and general relativity The problems which have been developed tested and refined by the authors over the past two decades are a mixture of short form and multi part extended problems with hints provided where appropriate Complete solutions are elaborated for every problem in a different section of the book some solutions include brief discussions on their physical or historical significance Designed as a companion text to complement a main relativity textbook it does not assume access to any specific textbook This is a helpful resource for advanced students for self study a source of problems for university teaching assistants or as inspiration for instructors and examiners constructing problems for their lectures homework or exams

Core List of Books and Journals in Science and Technology Russell H. Powell, James R. Powell, 1987-10 *Whitaker's Cumulative Book List*, 1984 *Forthcoming Books* Rose Arny, 1991 *Paperbound Books in Print*, 1992 *Global Spacetime Structure* JB Manchak, 2020-12-03 This exploration of the global structure of spacetime within the context of general relativity examines the causal and singular structures of spacetime revealing some of the curious possibilities that are compatible with the theory such as time travel

and holes of various types Investigations into the epistemic and modal structures of spacetime highlight the difficulties in ruling out such possibilities unlikely as they may seem at first The upshot seems to be that what counts as a physically reasonable spacetime structure in modern physics is far from clear
