Furman,Panos M. Pardalos,2009-06-17 In a world with highly competitive markets and economic instability due to capitalization industrial competition has increasingly intensified In order for many industries to survive and succeed they need to develop highly effective coordination between supply chain partners dynamic collaborative and strategic alliance relationships and efficient logistics and supply chain network designs Consequently in the past decade there has been an explosion of interest among academic researchers and industrial practitioners in innovative supply chain and logistics models algorithms and coordination policies Mathematically distinct from classical supply chain management this emerging research area has been proven to be useful and applicable to a wide variety of industries This book brings together recent advances in supply chain and logistics research and computational optimization that apply to a collaborative

environment in the enterprise      Food Properties and Computer-Aided Engineering of Food Processing Systems R.P. Singh, Augusto G. Medina, 2012-12-06 Food properties whether they concern the physical thermodynamic chemical nutritional or sensory characteristics of foods play an important role in food processing In our quest to gain a mechanistic understanding of changes occurring during food processing the knowledge of food properties is essential Quantitative information on the food properties is necessary in the design and operation of food processing equipment Foods because of their biological nature and variability vary in the magnitude of their properties The variation in properties offer a challenge both in their measurement and use in the food processing applications Often a high level of precision in measurement of properties is not possible as the measurement method may itself cause changes to the product resulting in a variation in the obtained values Recognizing the difficulties in measurement of food properties and the lack of completeness of such information several research programs have been in existence during the last two decades In Europe a multinational effort has been underway since 1978 The first project supported by COST European Cooperation in the Field of Scientific and Technical Research was titled COST 90 The Effect of Processing on the Physical Properties of Foodstuffs This and another project COST 90bis have considerably added to our knowledge of measurement methods and data on a number of physical properties Two publications that summarize the work conducted under 1 2 these projects are Physical Properties of Foods and Physical Properties of Foods      **Material And Energy Balances For Engineers And Environmentalists** Colin William Oloman, 2009-05-21 Material and energy balances are fundamental to many engineering disciplines and have a major role in decisions related to sustainable development This text which covers the substance of corresponding undergraduate courses presents the balance concepts and calculations in a format accessible to students engineering professionals and others who are concerned with the material and energy future of our society Following a review of the basic science and economics the text focuses on material and energy accounting in batch and continuous operations with emphasis on generic process units flow sheets stream tables and spreadsheet calculations There is a unified approach to reactive and non reactive energy balance calculations plus chapters dedicated to the general balance equation and simultaneous material and energy balances Seventy worked examples show the elements of process balances and connect them with the material and energy concerns of the 21st century      Progress in Engineering Optimization-1981 Roger Mayne, K.
