Mine-Mathematics- Term-1 Saraswati Experts, A text book on Maths **Algorithmic Probability and Combinatorics** Manuel Lladser, 2010-07-30 This volume contains the proceedings of the AMS Special Sessions on Algorithmic Probability and Combinatorics held at DePaul University on October 5-6, 2007, and at the University of British Columbia on October 4-5, 2008. This volume collects cutting-edge research and expository on algorithmic probability and combinatorics. It includes contributions by well-established experts and younger researchers who use generating functions, algebraic and probabilistic methods, as well as asymptotic analysis, on a daily basis. Walks in the quarter plane and random walks, quantum rotor, and self

avoiding permutation tableaux and random permutations are considered. In addition, articles in the volume present a variety of saddle point and geometric methods for the asymptotic analysis of the coefficients of single and multivariable generating functions associated with combinatorial objects and discrete random structures. The volume should appeal to pure and applied mathematicians as well as mathematical physicists; in particular, anyone interested in computational aspects of probability, combinatorics, and enumeration. Furthermore, the expository or partly expository papers included in this volume should serve as an entry point to this literature not only to experts in other areas but also to graduate students.
