### **Mechanical And Electronics Engineering - Proceedings Of The International Conference On Icmee 2009**

Venkatesh Mahadevan, Jianhong Zhou, 2009-07-16 The 2009 International Conference on Mechanical and Electronics Engineering ICMEE 2009 will be held in Chennai India from 24-26 July 2009 The aim of ICMEE 2009 is to provide a platform for researchers engineers academicians as well as industrial professionals from all over the world to present their research findings and development activities in mechanical and electronics engineering This conference provides opportunities for the delegates to exchange new ideas and application experiences face to face to forge new business or research relations and to find global partners for future collaboration **Partial Differential Equations** Phoolan Prasad, Renuka Ravindran, 1985

This book provides a basic introductory course in partial differential equations in which theory and applications are interrelated and developed side by side Emphasis is on proofs which are not only mathematically rigorous but also constructive where the structure and properties of the solution are investigated in detail The authors feel that it is no longer necessary to follow the tradition of introducing the subject by deriving various partial differential equations of continuum

mechanics and theoretical physics Therefore the subject has been introduced by mathematical analysis of the simplest yet one of the most useful from the point of view of applications class of partial differential equations namely the equations of first order for which existence uniqueness and stability of the solution of the relevant problem Cauchy problem is easy to discuss Throughout the book attempt has been made to introduce the important ideas from relatively simple cases some times by referring to physical processes and then extending them to more general systems

**Introduction to Computational Fluid Dynamics** Anil W. Date, 2005-08-08 Introduction to Computational Fluid Dynamics is a textbook for advanced undergraduate and first year graduate students in mechanical aerospace and chemical engineering The book emphasizes understanding CFD through physical principles and examples The author follows a consistent philosophy of control volume formulation of the fundamental laws of fluid motion and energy transfer and introduces a novel notion of smoothing pressure correction for solution of flow equations on collocated grids within the framework of the well known SIMPLE algorithm The subject matter is developed by considering pure conduction diffusion convective transport in 2 dimensional boundary layers and in fully elliptic flow situations and phase change problems in succession The book includes chapters on discretization of equations for transport of mass momentum and energy on Cartesian structured curvilinear and unstructured meshes solution of discretised equations numerical grid generation and convergence enhancement Practising engineers will find this particularly useful for reference and for continuing education
