Textbook of Three-Dimensional Echocardiography Luigi P. Badano, Roberto M. Lang, Denisa Muraru, 2019-08-14 This thoroughly revised textbook provides a practically applicable guide to three dimensional echocardiography. 3DE Background is provided on the evolution of the technology and physics that support the implementation of both transthoracic and transesophageal approaches to 3DE. The incremental value of 3DE to assess cardiac chambers is also described. Moreover a range of cardiac valvular diseases including the mitral, aortic and tricuspid valve have been portrayed and illustrated in depth. These include congenital abnormalities, regurgitation and stenosis. Emphasis is also placed on technical aspects of the technique and where it can provide added value including post surgery assessments and evaluation of cardiac masses. *Textbook of Three Dimensional Echocardiography* enables readers to develop a deep understanding of how to use this imaging modality. It provides a valuable resource for the echocardiography trainee looking to develop their knowledge and for the experienced practitioner seeking a comprehensive up to date reference. Functional Imaging and Modeling of the Heart Alejandro F. Frangi, Petia I. Radeva, Andres Santos, Monica Hernandez, 2005-06-13

The 1st and 2nd International Conferences on Functional Imaging and Modelling of the Heart (FIMH) were held in Helsinki Finland in November 2001 and in Lyon France in June 2003. These meetings were born through a fruitful scientific collaboration between France and Finland that outreached to other groups and led to the start of this biennial event. The FIMH conference was the first attempt to agglutinate researchers from several complementary but often isolated fields: cardiac imaging, signal and image processing, applied mathematics and physics, biomedical engineering and computer science, cardiology, radiology, biology and physiology. In the first two editions the conference received an enthusiastic acceptance by experts of all these communities. FIMH was originally started as a European event and has increasingly attracted more and more people from the US and Asia. This edition of FIMH received the largest number of submissions so far with a result of 47 papers being accepted as either oral presentations or posters. There were a number of submissions from non EU institutions which confirms the growing interest in this series of meetings. All papers were reviewed by up to four reviewers. The accepted contributions were organized into 8 oral sessions and 3 poster sessions complemented by a number of invited talks. This year we tried to allocate

as many papers as possible as oral presentations to facilitate more active participation and to stimulate multidisciplinary discussions Functional Imaging and Modeling of the Heart Nicholas Ayache,Hervé Delingette,Maxime
