Craig, 2016-12-15 **The Construction of Optimal Stated Choice Experiments** Deborah J. Street, Leonie Burgess, 2007-07-13 The most comprehensive and applied discussion of stated choice experiment constructions available The Construction of Optimal Stated Choice Experiments provides an accessible introduction to the construction methods needed to create the best possible designs for use in modeling decision making Many aspects of the design of a generic stated choice experiment are independent of its area of application and until now there has been no single book describing these constructions This book begins with a brief description of the various areas where stated choice experiments are applicable including marketing and health economics transportation environmental resource economics and public welfare analysis The

authors focus on recent research results on the construction of optimal and near optimal choice experiments and conclude with guidelines and insight on how to properly implement these results Features of the book include Construction of generic stated choice experiments for the estimation of main effects only as well as experiments for the estimation of main effects plus two factor interactions Constructions for choice sets of any size and for attributes with any number of levels A discussion of designs that contain a none option or a common base option Practical techniques for the implementation of the constructions Class tested material that presents theoretical discussion of optimal design Complete and extensive references to the mathematical and statistical literature for the constructions Exercise sets in most chapters which reinforce the understanding of the presented material The Construction of Optimal Stated Choice Experiments serves as an invaluable reference guide for applied statisticians and practitioners in the areas of marketing health economics transport and environmental evaluation It is also ideal as a supplemental text for courses in the design of experiments decision support systems and choice models A companion web site is available for readers to access web based software that can be used to implement the constructions described in the book *Longitudinal Data Analysis* Donald Hedeker, Robert D.

Gibbons, 2006-05-12 Longitudinal data analysis for biomedical and behavioral sciences This innovative book sets forth and describes methods for the analysis of longitudinal data emphasizing applications to problems in the biomedical and behavioral sciences Reflecting the growing importance and use of longitudinal data across many areas of research the text is designed to help users of statistics better analyze and understand this type of data Much of the material from the book grew out of a course taught by Dr Hedeker on longitudinal data analysis The material is therefore thoroughly classroom tested and includes a number of features designed to help readers better understand and apply the material Statistical procedures featured within the text include Repeated measures analysis of variance Multivariate analysis of variance for repeated measures Random effects regression models RRM Covariance pattern models Generalized estimating equations GEE models Generalizations of RRM and GEE for categorical outcomes Practical in their approach the authors emphasize the applications of the methods using real world examples for illustration Some syntax examples are provided although the authors do not generally focus on software in this book Several datasets and computer syntax examples are posted on this title's companion Web site The authors intend to keep the syntax examples current as new versions of the software programs emerge This text is designed for both undergraduate and graduate courses in longitudinal data analysis Instructors can take advantage of overheads and additional course materials available online for adopters Applied statisticians in biomedicine and the social sciences can also use the book as a convenient reference **The Fitness of Information** Chaomei Chen, 2014-07-30 Theories and practices to assess critical information in a complex adaptive system Organized for readers to follow along easily The Fitness of Information Quantitative Assessments of Critical Evidence provides a structured outline of the key challenges in assessing crucial information in a complex adaptive system Illustrating a variety of computational and

explanatory challenges the book demonstrates principles and practical implications of exploring and assessing the fitness of information in an extensible framework of adaptive landscapes The book's first three chapters introduce fundamental principles and practical examples in connection to the nature of aesthetics mental models and the subjectivity of evidence In particular the underlying question is how these issues can be addressed quantitatively not only computationally but also explanatorily The next chapter illustrates how one can reduce the level of complexity in understanding the structure and dynamics of scientific knowledge through the design and use of the CiteSpace system for visualizing and analyzing emerging trends in scientific literature The following two chapters explain the concepts of structural variation and the fitness of information in a framework that builds on the idea of fitness landscape originally introduced to study population evolution The final chapter presents a dual map overlay technique and demonstrates how it supports a variety of analytic tasks for a new type of portfolio analysis The Fitness of Information Quantitative Assessments of Critical Evidence also features In depth case studies and examples that characterize far reaching concepts illustrate underlying principles and demonstrate profound challenges and complexities at various levels of analytic reasoning Wide ranging topics that underline the common theme from the subjectivity of evidence in criminal trials to detecting early signs of critical transitions and mechanisms behind radical patents An extensible and unifying framework for visual analytics by transforming analytic reasoning tasks to the assessment of critical evidence The Fitness of Information Quantitative Assessments of Critical Evidence is a suitable reference for researchers analysts and practitioners who are interested in analyzing evidence and making decisions with incomplete uncertain and even conflicting information The book is also an excellent textbook for upper undergraduate and graduate level courses on visual analytics information visualization and business analytics and decision support systems
