*Advances in Hydroinformatics* Philippe Gourbesville,Guy Caignaert,2020-07-25 This book features a collection of  
extended papers based on presentations given at the SimHydro 2019 conference held in Sophia Antipolis in June 2019 with  
the support of French Hydrotechnic Society SHF focusing on Which models for extreme situations and crisis management  
Hydraulics and related disciplines are frequently applied in extreme situations that need to be understood accurately before  
implementing actions and defining appropriate mitigation measures However in such situations currently used models may  
be partly irrelevant due to factors like the new physical phenomena involved the scale of the processes and the hypothesis  
included in the different numerical tools The availability of computational resources and new capacities like GPU offers  
modellers the opportunity to explore various approaches to provide information for decision makers At the same time the  
topic of crisis management has sparked interest from stakeholders who need to share a common understanding of a situation  
Hydroinformatics tools can provide essential information in crises however the design and integration of models in decision  
support systems require further development and the engagement of various communities such as first responders In this  
context methodologies guidelines and standards are more and more in demand in order to ensure that the systems developed  
are efficient and sustainable Exploring both the limitations and performance of current models this book presents the latest  
developments based on new numerical schemes high performance computing multiphysics and multiscale methods as well as  
better integration of field scale model data As such it will appeal to practitioners stakeholders researchers and engineers
