Education 4.0 Knowledge. Peter Chew Method For Quadratic Equation [2nd Edition] Peter Chew,2023-03-29 The Peter Chew Method for Quadratic Equations is a simple and efficient approach for solving quadratic equations problem Its objective is to make it easier for the upcoming generation to solve quadratic equations including higher order function problems that cannot be solved by current methods The French mathematician Veda established the relationship between the equation root and the coefficient in 1615 Veda s theorem states that if and are two roots of the quadratic equation $ax^2 + bx + c = 0$ and $a \neq 0$ Then the sum of the two roots b/a the product of the two roots c/a The current method for solving quadratic equations involves finding the values of and using Veda s theorem and then converting the problem given into the and forms and then substituting the values of and to the problem given obtain the answer However this method is inadequate for solving higher order function quadratic equations since it is difficult to convert them into and forms With the Peter Chew method we can solve higher order function quadratic equations without the need to convert them into and forms Additionally this approach is applicable to quadratic equations with complex roots and complex coefficients The Peter Chew method involves finding the roots of the quadratic equation denoting them as and and then substituting these values to the problem given to find the answer

Beyond the Quadratic Formula Ron Irving,2020-01-29 The quadratic formula for the solution of quadratic equations was discovered independently by scholars in many ancient cultures and is familiar to everyone Less well known are formulas for solutions of cubic and quartic equations whose discovery was the high point of 16th century mathematics Their study forms the heart of this book as part of the broader theme that a polynomial s coefficients can be used to obtain detailed information on its roots The book is designed for self study with many results presented as exercises and some supplemented by outlines for solution The intended audience includes in service and prospective secondary mathematics teachers high school students eager to go beyond the standard curriculum undergraduates who desire an in depth look at a topic they may have unwittingly skipped over and the mathematically curious who wish to do some work to unlock the mysteries of this beautiful subject
