| Question 1: The ninth graders are hosting the next school dance. They would like to make at least a \$500 profit from selling tickets to the dance. The ninth graders estimate that at most 300 students will attend the dance. They will earn \$3 for each ticket purchased in advance and \$4 for each ticket purchased at the door. What system of linear inequalities represents this situation?		
a. $x + y \leq 300$ $3x + 4y \leq 500$	b. $3x + 4y \leq 300$ $x + y \geq 500$	c. $x + y \leq 300$ $3x + 4y \geq 500$

If the students sell 50 tickets in advance and 60 tickets at the door, will they meet both constraints?

Schlesinger,Václav Hlavác,2013-03-09 Preface to the English edition This monograph Ten Lectur es on Statistical and Structural Pattern Recognition uncovers the close relationship between various well known pattern recognition problems that have so far been considered independent These relationships became apparent when formal procedures addressing not only known prob lems but also their generalisations were discovered The generalised problem formulations were analysed mathematically and unified algorithms were found The book unifies of two main streams ill pattern recognition the statisti cal a11d structural ones In addition to this bridging on the uppermost level the book mentions several other unexpected relations within statistical and structural methods The monograph is intended

for experts for students as well as for those who want to enter the field of pattern recognition The theory is built up from scratch with almost no assumptions about any prior knowledge of the reader Even when rigorous mathematical language is used we make an effort to keep the text easy to comprehend This approach makes the book suitable for students at the beginning of their scientific career Basic building blocks are explained in a style of an accessible intellectual exercise thus promoting good practice in reading mathematical text The paradoxes beauty and pitfalls of scientific research are shown on examples from pattern recognition Each lecture is amended by a discussion with an inquisitive student that elucidates and deepens the explanation providing additional pointers to computational procedures and deep rooted errors **Solving Large Scale Learning Tasks. Computer Safety, Reliability and Security Wolfgang Ehrenberger,1998-09-23 Computers and their interactions are becoming the characteristic features of our time Many people believe that the industrial age is going over into the information age In the same way as life of the beginning of this century was dominated by machines factories streets and railways the starting century will be characterised by computers and their networks This change naturally affects also the institutions and the installations our lives depend upon power plants including nuclear ones chemical plants mechanically working factories cars railways and medical equipment they all depend on computers and their connections In some cases it is not human life that may be endangered by computer failure but large investments e g if a whole plant interrupts its production for a long time In addition to loss of life and property one must not neglect public opinion which is very critical in many countries against major technical defects The related computer technology its hardware software and production process differ between standard applications and safety related ones In the safety case it is normally not only the manufacturers and the customers that are involved but a third party usually an assessor who is taking care of the public interest on behalf of a state authority Usually safety engineers are in a better position than their colleagues from the conventional side as they may spend more time and money on a particular task and use better equipment E-math Ii Tm' 2007 Ed.(intermediate Algebra) , **Zeroing Dynamics, Gradient Dynamics, and Newton Iterations** Yunong Zhang,Lin

Kern,G. Still,2013-04-17 Algorithmic Principles of Mathematical Programming investigates the mathematical structures and principles underlying the design of efficient algorithms for optimization problems Recent advances in algorithmic theory have shown that the traditionally separate areas of discrete optimization linear programming and nonlinear optimization are closely linked This book offers a comprehensive introduction to the whole subject and leads the reader to the frontiers of current research The prerequisites to use the book are very elementary All the tools from numerical linear algebra and calculus are fully reviewed and developed Rather than attempting to be encyclopedic the book illustrates the important basic techniques with typical problems The focus is on efficient algorithms with respect to practical usefulness Algorithmic complexity theory is presented with the goal of helping the reader understand the concepts without having to become a theoretical specialist Further theory is outlined and supplemented with pointers to the relevant literature
