MOP Connection: Sound and Music: sublevel 1

TRUE or FALSE: Identify the following statements as being either true (T) or false (F).

T or F?

True

1. Sound waves are longitudinal waves.

False

2. As the teacher talks, students hear the voice because particles of air move from the mouth of the teacher to the ear of the student.

True

3. Sound waves are mechanical waves.

True

4. All sound waves are produced by a vibrating object.

True

5. A sound wave does not consist of crests and troughs.

6. Mac is talking to Kate. The dot at A represents a particle of air. Describe the motion that this particle must undergo in order for Kate to hear Mac. Then show the motion by placing arrows on the diagram.

The particle of air vibrates back and forth about its fixed position. It does not translate; it vibrates. That is, the particle does not move to Kate. It simply wiggles back and forth about position A. The amplitude of its vibration is abnormally small, nowhere close in scale to that represented by the arrow on the diagram.

7. Tosh is holding one end of a slinky; the opposite end is attached to a wall. Tosh wishes to produce a longitudinal wave in the slinky. Describe how Tosh must move his hand in order to produce a longitudinal wave. Then place arrows on the diagram to show the way in which Tosh must move his hand.

In longitudinal waves (like sound waves), particles of the medium (in this case, the coils) vibrate back and forth parallel to the direction of wave motion. To cause this parallel motion, Tosh must vibrate the first rightward and leftward.

8. A sound wave is moving through air. The diagram below represents a snapshot of the air particles at a given instant in time. Several regions are labeled with a letter. Use the letters to identify the compressions and rarefactions.

Compressions: A, C, E, G, I and K

Rarefactions: B, D, F, H and J

9. A science fiction film depicts inhabitants of one spaceship (in outer space) hear the sound of a nearby spaceship as it zooms past at high speeds. Critique the physics of this film.

Sound waves are mechanical waves - they require a medium in order to move one location to another. The film disregards this property of sound waves by depicting their motion through space that is void of matter. Only electromagnetic waves could travel through the vacuum of outer space.

Culturally Relevant Arts Education for Social Justice Mary Stone Hanley, Gilda L. Sheppard, George W. Noblit, Thomas Barone, 2013-08-21. A groundswell of interest has led to significant advances in understanding and using Culturally Responsive Arts Education to promote social justice and education. This landmark volume provides a theoretical orientation to these endeavors. Examining a range of efforts across different forms of art, various educational settings and diverse contexts, it foregrounds the assets of imagination, creativity, resilience, critique and cultural knowledge working against prevailing understandings of marginalized groups as having deficits of knowledge, skills or culture. Emphasizing the arts as a way to make something possible, it explores and illustrates the elements of social justice arts education as a way out of no way imposed by dominance and ideology. A set of powerful demonstrations shows how this work looks in action. Introductions to the book as a whole and to each section focus on how to use the chapters pedagogically. The conclusion pulls back the chapters into theoretical and pedagogical context and suggests what needs done to be done practically, empirically and theoretically for the field to continue to develop.

Film Music Analysis Frank Lehman, 2024-05-31. Since the establishment of film music studies, there has been a steady growth of serious analytical work on the film music repertoire. *Film Music Analysis: Studying the Score* offers the first collection of essays dedicated to the close investigation of musical structure and meaning in film music. Showcasing scholarship from a diverse and distinguished group of music theorists and musicologists, this book presents the many ways to inspect the inner workings of film music in a manner that is exciting and accessible to anyone curious about this music regardless of their background in film or music theory. Each chapter takes as its focus one music theoretical parameter and explores how that concept can be used to analyze and interpret film music. Covering theoretical concepts that range from familiar categories such as leitmotif and pitch structure to more cutting edge ideas such as timbral associativity, topic theory and metrical states, the book provides a toolkit with which to explore this captivatingly varied repertoire. With example analyses drawn from classic and contemporary films, *Film Music Analysis: Studying the Score* is a valuable teaching tool and an indispensable addition to the
