Good Nature Kathy Willis,2024-12-03 A ground breaking investigation into newly discovered evidence showing that remarkable things happen to our bodies and our minds when our senses connect with the natural world We all take for granted the idea that being in nature makes us feel better But if you were a skeptical scientist or indeed any kind of sceptic who wanted hard scientific evidence for this idea where would you look And how would that evidence be gathered It wasn't until Dr Kathy Willis was asked to contribute to an international project looking for the societal benefits we gain from plants that she stumbled across a study that radically changed the way she saw the natural world In the study there was clear proof that patients recovering from gall bladder operations recovered more quickly if they were looking at trees In fact in the last decade there has been an explosion of proof that incredible things happen to our bodies and our minds when our senses interact with the natural world In Good Nature Kathy Willis takes the reader on a journey with her to dig out all the experiments around the world that are looking for this evidence experiments made easier by the new kinds of data being collected from satellites and big data biobanks Having a vase of roses on your desk or a green wall in your office makes a measurable difference to your wellbeing certain scents in room diffusers genuinely can boost your immune system and in a chapter that Kathy calls Hidden Sense we learn that touching organic soil has a significant effect on the healthiness of your microbiome What is remarkable about this book is how its revelations should to be commonsense schools should let children play in nature to improve their health and concentration urban streets should have trees and yet it reveals just how difficult it is to prove this to businesses and governments As Kathy Willis says in her narrative We now know enough to self prescribe in our homes offices or working spaces gardens and when out walking However small these individual actions might be overall they have the potential to provide a large number of health benefits And we need to be encouraging others to do the same Nature is far more than just something that is useful for our health It is not a dispensable commodity It is an inherent part of us
