Foundations of Quantum Physics II (1933-1958) J. Kalckar, 2013-10-22 Volume 7 is a direct continuation of Volume 6 which documented the birth of the complementarity argument and its earliest elaborations It covers the extension and refinement of the complementarity argument from 1933 until Bohrs death in 1962 All Bohr s publications on the subject together with selected manuscripts and extracts of his correspondence with friends and fellow pioneers such as Werner Heisenberg and Wolfgang Pauli are included Divided into two largely independent parts the volume begins with Bohr s contributions to Relativistic Quantum Theory Together with L on Rosenfeld Bohr undertook a thorough investigation of the measuring problem in quantum electrodynamics and demonstrated the full accordance between the formalism and the result of idealized thought experiments The articles in the second part although also restricted in scope to the field of physics address a broader audience One of the most impressive treatises is Bohr s own account of his debates with Albert Einstein over more than twenty years on the consistency the completeness and the epistemological consequences of quantum mechanics Volumes 6 and 7 of the Collected Works are in turn related to the forthcoming Volume 10 which broadens the scope by presenting Bohr

s applications of the complementarity argument beyond the domain of physics Although each volume may be read independently careful attention should be paid to the interrelationships between each volume in order to appreciate the subtlety of Bohr s continued elaboration and fine tuning of his complementarity argument

Complementarity Beyond Physics (1928-1962) D. Favrholt, 2013-10-22 This volume is divided into five parts The title of the volume refers primarily to part I which is by far the largest and comprises papers discussing the fundamental questions of biology and related psychological and philosophical problems Following the reproduction of papers brought to publication by Bohr there is a separate Appendix to Part I including some of Bohr s most interesting and substantive unpublished contributions in this area The papers in Part I span the last thirty years of Bohr s life and display his great interest in biological problems and his unrelenting efforts to show that biology cannot be reduced to physics and chemistry Part II contains articles of a more general cultural interest Some of these show that Bohr regarded the complementary perspective to be of value also outside the scientific sphere Part III contains the articles Bohr wrote about the great Danish philosopher Harald H ffding These short papers are presented in a section on their own because of the continuing discussion in the history of science about H ffding s possible influence on Bohr s work in physics and his whole scientific approach Part IV comprises articles illuminating the history of 20th century physics Bohr had great veneration for his predecessors and teachers and he prepared these articles with great care Part V contains correspondence relating to the material in Parts I through IV As in previous volumes an inventory of relevant unpublished manuscripts held at the Niels Bohr Archive constitutes an appendix to the whole volume
