Libecap, 2007 In the contemporary West pressures to more effectively reallocate water to meet growing urban and environmental demands are increasing as environmental awareness grows and climate change threatens existing water supplies The legacy of Owens Valley raises concerns about how reallocation can occur Although it took place over seventy years ago the water transfer from Owens Valley to Los Angeles still plays an important role in perceptions of how water markets work The memory of Owens Valley transfer is one of theft and environmental destruction at the hands of Los Angeles In reassessing the infamous transfer one could say that there was no theft Owens Valley landowners fared well in their land and water sales earning more than if they had stayed in agriculture In another sense however theft did occur The water was not literally stolen but there was a sharp imbalance in gains from the trade with most of the benefits going to Los Angeles Owens Valley then demonstrates the importance of distributional issues in water trades when the stakes are large Los Angeles water rights in the Owens Valley and Mono Basin have again been a front page issue since 1970 New environmental and recreational values and air pollution concerns have ushered in demands to curtail the shipment of water from source regions for urban use *Owens Valley Revisited* A Reassessment of the West's First Great Water Transfer carefully explores how these sagas were addressed considering the costs involved and alternative approaches that might have resulted in more rapid and less contentious remedies This analysis offers insights to guide the ongoing conversation about water politics and the future thereof **New Water Regimes**

for the region Connell argues that a new institutional system is essential but a Commonwealth takeover is not the best answer Instead the Commonwealth government should use its constitutional and financial power to force the States to adopt national policies and stick to them whatever the local politics The States would continue to play a substantial role but the controls would be tighter the framework more comprehensive He also shows how the National Water Initiative the great blueprint for water reform has stalled with many of its most important recommendations ignored So far the public debate about the future of the Murray Darling Basin has concentrated on new technical projects and increased water trading Connell argues that unless institutional change is given priority hundreds of millions of dollars of annual investment will be frittered away and the crisis will continue
