Guide to Information Sources in Mathematics and Statistics

Martha A. Tucker, Nancy D. Anderson, 2004-09-30 This book is a reference for librarians mathematicians and statisticians involved in college and research level mathematics and statistics in the 21st century We are in a time of transition in scholarly communications in mathematics practices which have changed little for a hundred years are giving way to new modes of accessing information Where journals books indexes and catalogs were once the physical representation of a good mathematics library shelves have given way to computers and users are often accessing information from remote places Part I is a historical survey of the past 15 years tracking this huge transition in scholarly communications in mathematics Part II of the book is the bibliography of resources recommended to support the disciplines of mathematics and statistics These are grouped by type of material Publication dates range from the 1800 s onwards Hundreds of electronic resources some online both dynamic and static some in fixed media are listed among the paper resources Amazingly a majority of listed electronic resources are free

Advances in the

Theory of Numbers Ayşe Alaca, Şaban Alaca, Kenneth S. Williams, 2015-10-28 The theory of numbers continues to occupy a central place in modern mathematics because of both its long history over many centuries as well as its many diverse applications to other fields such as discrete mathematics cryptography and coding theory The proof by Andrew Wiles with Richard Taylor of Fermat's last theorem published in 1995 illustrates the high level of difficulty of problems encountered in number theoretic research as well as the usefulness of the new ideas arising from its proof The thirteenth conference of the Canadian Number Theory Association was held at Carleton University Ottawa Ontario Canada from June 16 to 20 2014

Ninety nine talks were presented at the conference on the theme of advances in the theory of numbers Topics of the talks reflected the diversity of current trends and activities in modern number theory These topics included modular forms hypergeometric functions elliptic curves distribution of prime numbers diophantine equations L functions Diophantine approximation and many more This volume contains some of the papers presented at the conference All papers were refereed The high quality of the articles and their contribution to current research directions make this volume a must for any mathematics library and is particularly relevant to researchers and graduate students with an interest in number theory The editors hope that this volume will serve as both a resource and an inspiration to future generations of researchers in the theory of numbers **Bulletin - Institute of Mathematical Statistics** Institute of Mathematical Statistics,1989

Number Theory Canadian Number Theory Association. Conference,Rajiv Gupta,Kenneth S. Williams,1999 This book contains papers presented at the Fifth Canadian Number Theory Association CNTA conference held at Carleton University Ottawa Ontario The invited speakers focused on arithmetic algebraic geometry and elliptic curves diophantine problems analytic number theory and algebraic and computational number theory The contributed talks represented a wide variety of areas in number theory David Boyd gave an hour long talk on Mahler s Measure and Elliptic Curves This lecture was open to the public and attracted a large audience from outside the conference **Canadiana** ,1986 **The Red Book** ,1988
