The Improbable Primate How Water Shaped Human Evolution:

The Improbable Primate Clive Finlayson, 2014 **The Improbable Primate** Clive Finlayson, 2014-03 In *The Improbable Primate* Clive Finlayson gives a provocative view of human evolution arguing that the critical factor that shaped us was water. Questioning current accounts of tools and our spread from Africa he presents an ecological viewpoint. *The Cradle of Humanity* Mark Maslin, 2017 One of the fundamental questions of our existence is why we are so smart. There are lots of drawbacks to having a large brain including the huge food intake needed to keep the organ running the frequency with which it goes wrong and our very high infant and mother mortality rates compared with other mammals due to the difficulty of giving birth to offspring with very large heads. So why did evolution favour the brainy ape? This question has been widely debated among biological anthropologists and in recent years Maslin and his colleagues have pioneered a new theory that might just be the answer. Looking back to a crucial period some 1.9 million years ago when brain capacity increased by as much as 80% *The Cradle of Humanity* explores the implications of two adaptive responses by our hominin ancestors to rapid climatic changes: big jaws and big brains. Maslin argues that the impact of changing landscapes and fluctuating climates that led to the appearance of intermittent freshwater lakes in East Africa may have played a key role in human evolution. Alongside the physical evidence of fossils and tools he considers social theories of why a large complex brain would have provided a major advantage when trying to survive in the constantly changing East African landscape. *Human Fatigue* Francesco Marino, 2019-03-15 Fatigue is a condition spanning the breadth of human functioning in health and disease and is a central concern in sport and exercise. Even so we are yet to fully understand its causes. One reason for this lack of understanding is that we seldom consider fatigue from an evolutionary perspective as an adaptation that provided reproductive success. This ground breaking book outlines the evidence that fatigue is a result of adaptations distinctive to humans. It argues that humans developed adaptations which led to enhanced fatigue resistance compared with other mammals and discusses the implications in the context of exercise health and performance. Highly illustrated throughout it covers topics such as defining and measuring fatigue the emotional aspect of fatigue how thermoregulation affects the human capacity to resist fatigue and fatigue in disease. *Human Fatigue* is essential reading for all exercise scientists as well as graduate and undergraduate students in the broad field of physiology and exercise physiology. **Human Evolution Beyond Biology and Culture** Jeroen C. J. M. van den Bergh, 2018-10-18 A complete account of evolutionary thought in the social, environmental and policy sciences creating bridges with biology. **Neurobiological Evolution of Humans** Ali Moghtaderi, 2024-12-27 Our perception of the brain structure and function as an organ full of secrets and mysteries must change and it is necessary to consider it as a part of the body that is constantly evolving and developing to maintain homeostasis for the entire human organism. New fossils, imaging methods, molecular genetics, comparative anatomy, evolutionary psychology, cognitive concepts in neuroscience and neurology have made it possible to address questions of the

neurological evolution of humans This book integrates disparate findings from those disciplines in a succinct history by explaining how evolutionary process occurred reshaped our brain reconstructed our mind and finally changed our selves Key Features Explains complex scientific concepts in neurobiology using lucid prose and maintaining a clear narrative Provides well documented arguments supported by hundreds of references and citations Documents a complex history which unfolded over millions of years Offers new approaches intended to transform ideas opinions and intellectual foundations of the brain

Human Origins Camilla Power, Morna Finnegan, Hilary Callan, 2016-12-01 Human Origins brings together new thinking by social anthropologists and other scholars on the evolution of human culture and society No other discipline has more relevant expertise to consider the emergence of humans as the symbolic species Yet social anthropologists have been conspicuously absent from debates about the origins of modern humans These contributions explore why that is and how social anthropology can shed light on early kinship and economic relations gender politics ritual cosmology ethnobiology medicine and the evolution of language

The Wrong Ape for Early Human Origins M. Kay Martin, 2023-04-11 The Wrong Ape for Early Human Origins examines ways in which the chimpanzee referential model has exerted a primary influence on evolutionary theory dominating portraits of proto and early human social life and in the broader sense of human nature itself Evidence on which this model is based is revisited along with new cross disciplinary findings that point to alternative scenarios for hominin phylogeny ecology and subsistence primeval kinship cognition and language and the respective roles played by aggression and cooperation as evolutionary drivers Recent advances in phylogenetics evolutionary biology and new additions to the fossil record are rendering linear monotypic models obsolete Contemporary theories on species divergence and change over time are shifting attention from ancient genotypes to factors that influence gene expression and from innate prescriptive behaviors to epigenesis and the capacity for behavioral plasticity This broader platform has the potential to fundamentally revise current notions about the basic nature phenotypic traits and lifeways of ancestral humans It informs a different profile of our progenitors one that reflects greater ecological bandwidth reliance on creative niche construction and hominin agency in the structuring of ancient reproductive and social groups

Social DNA M. Kay Martin, 2018-10-19 What set our ancestors off on a separate evolutionary trajectory was the ability to flex their reproductive and social strategies in response to changing environmental conditions Exploring new cross disciplinary research that links this capacity to critical changes in the organization of the primate brain Social DNA presents a new synthesis of ideas on human social origins challenging models that trace our beginnings to traits shaped by ancient hunting economies or to genetic platforms shared with contemporary apes

When We Are Human John Zerzan, 2021-07-13 These are dark and darkening times challenging us to look deeper to grasp the roots and dynamics of the looming civilizational crisis Chronic illness of the planet calls for radically new thinking if there is to be any hope of renewal When We Are Human offers thought at a necessary and primal level All previous civilizations have failed and now there s just one global civilization

which is starkly grandly failing To deny or avoid this fact is to remain in the sphere of the superficial the irrelevant The physical environment is reaching the catastrophe stage as the seas warm rise acidify and fill with plastics Icebergs ahead and floating past beachgoers idly watching the planet die So much is failing so much is interrelated in the technosphere of ever greater dependence and estrangement Social existence now strangely isolated is beset by mass shootings rising suicide rates slipping longevity loneliness anxiety and the maddening stream of lies and concocted politics Zerzan trains his passionate focus on several fields of discourse anthropology history philosophy technology psychology and the spiritual Points of light that become a kaleidoscope refracting new insights and contributing an overall picture of late civilization **The Human**

Condition Stefan Wurm,2020-03-10 Over a very short period only a few hundred years our understanding of the cosmos our planet Earth the evolution of life on it and the beginnings of our very own human endeavor have radically changed These revolutions in science and technology have dramatically altered our societies in many ways For quite some time it seemed as if our planets resources were unlimited Today we know that this is not the case Human civilizations are shaping our planets future in ways that have profound consequences for all other life on Earth as well as for us We need to reflect broadly on what defines our human condition if we wish our societies to be successful in navigating a future that cannot be just ours but must include the broad diversity of life on Earth without which humankind will not survive This book tells the story of how we discovered the universe how we learned about our planet and the life evolving on it how humanity emerged from pre history and what some of the future of our civilizations could hold **Central Places and Un-Central Landscapes** Giorgos

Papantoniou,Athanasios Vionis,2019-04-01 This volume examines the applicability of central place theory in contemporary archaeological practice and thought in light of ongoing developments in landscape archaeology by bringing together central places and un central landscapes and by grasping diachronically the complex relation between town and country as shaped by political economies and the availability of natural resources Moving away from model bounded approaches central place theory is used more flexibly to include all the places that may have functioned as loci of economic or ideological centrality even in a local context in the past Fourteen chapters examine centrality and un central landscapes from Prehistory to the late Middle Ages in different geographical contexts from Cyprus and the Levant through Greece and the Balkans to Italy France and Germany **Water Science, Policy and Management** Simon James Dadson,Dustin E. Garrick,Edmund C.

Penning-Rowsell,Jim W. Hall,Rob Hope,Jocelyne Hughes,2020-01-07 Provides an in depth look at science policy and management in the water sector across the globe Sustainable water management is an increasingly complex challenge and policy priority facing global society This book examines how governments municipalities corporations and individuals find sustainable water management pathways across competing priorities of water for ecosystems food energy economic growth and human consumption It looks at the current politics and economics behind the management of our freshwater ecosystems and infrastructure and offers insightful essays that help stimulate more intense and informed debate about the subject and

its need for local and international cooperation This book celebrates the 15 year anniversary of Oxford University's MSc course in Water Science Policy and Management Edited and written by some of the leading minds in the field writing alongside alumni from the course Water Science Policy and Management A Global Challenge offers in depth chapters in three parts Science Policy and Management Topics cover hydroclimatic extremes and climate change the past present and future of groundwater resources water quality modelling monitoring and management and challenges for freshwater ecosystems The book presents critical views on the monitoring and modelling of hydrological processes the rural water policy in Africa and Asia the political economy of wastewater in Europe drought policy management and water allocation It also examines the financing of water infrastructure the value of wastewater water resource planning sustainable urban water supply and the human right to water Features perspectives from some of the world's leading experts on water policy and management Identifies and addresses current and future water sector challenges Charts water policy trends across a rapidly evolving set of challenges in a variety of global areas Covers the reallocation of water policy process of risk management the future of the world's water under global environmental change and more Water Science Policy and Management A Global Challenge is an essential book for policy makers and government agencies involved in water management and for undergraduate and postgraduate students studying water science governance and policy

The Politics of Water in Post-War Britain Glen O'Hara, 2017-05-10 This is the first book to cover the British people's late twentieth century engagement with water in all its domestic national and international forms and from bathing and household chores to controversies about maritime pollution The British Isles a relatively wet and rainy archipelago cannot in any way be said to be short of liquid resources Even so it was the site of highly contentious and revealing political controversies over the meaning and use of water after the Second World War A series of such issues divided political parties pressure groups government and voters and form the subject matter of this book problems as diverse as flood defence to river and beach cleanliness from the teaching of swimming to the installation of hot and cold running water in the home from international controls over maritime pollution and from the different housework duties of men and women to the British state's proposals to fluoridise the drinking water supply

The Origins of Representations: Cognitive and Brain Development Athanassios Raftopoulos, 2025-07-20 This book provides an account of the origins and

development of iconic and symbolic representations in our evolutionary lineage the hominis and of the cognitive capacities and brain structures that support such a development At first it introduces the three basic types of signs such as indices icons and symbols used by most animals including apes and hominins for communicating and interacting with the environment and discusses the differences among them In turn it explains the evolution from non representational indices to iconic first and then symbolic representations in terms of the evolution of the cognitive capacities in our lineage The main emphasis is on the cognitive capabilities that support the use of these types of signs such as attention executive functions and working memory among others The discussion centers on determining these capacities and how and why these capacities evolved in the phylogenesis of hominids Further evidence from psychology and neuroscience are used to shed light on the development of these capacities in hominins together with knowledge about the basic brain structures supporting these capacities such as the prefrontal cortex and their development at the ontogenetic and phylogenetic scales All in all this book offers a theory of the development of our representational arsenal from its beginnings characterized by simple signs to its modern form made of highly abstract symbols

Deleuze and Evolutionary Theory Bennett Michael James
Bennett,2019-01-30 Deleuze and Evolutionary Theory gathers together contributions by many of the central theorists in Deleuze studies who have led the way in breaking down the boundaries between philosophical and biological research They focus on the significance of Deleuze and Guattari s engagements with evolutionary theory across the full range of their work from the interpretation of Darwin in Difference and Repetition to the symbiotic alliances of wasp and orchid in A Thousand Plateaus In this way they explore the anthropological social and biopolitical significance of the convergences and divergences between philosophy and evolutionary science

Crossing the Human Threshold Matt Pope,John McNabb,Clive Gamble,2017-11-22 When was the human threshold crossed What is the evidence for evolving humans and their emerging humanity This volume explores in a global overview the archaeology of the Middle Pleistocene 800 000 to 130 000 years ago when evidence for innovative cultural behaviour appeared The evidence shows that the threshold was crossed slowly by a variety of human ancestors and was not confined to one part of the Old World Crossing the Human Threshold examines the changing evidence during this period for the use of place landscape and technology It focuses on the emergence of persistent places and associated developments in tool use hunting strategies and the control of fire represented across the Old World by deeply stratified cave sites These include the most important sites for the archaeology of human origins in the Levant South Africa Asia and Europe presented here as evidence for innovation in landscape thinking during the Middle Pleistocene The volume also examines persistence at open locales through a cutting edge review of the archaeology of Northern France and England Crossing the Human Threshold is for the worldwide community of students and researchers studying early hominins and human evolution It presents new archaeological data It frames the evidence within current debates to understand the differences and similarities between ourselves and our ancient ancestors

The Five-Million-Year Odyssey Peter Bellwood, 2024-05-14 Human beings are incredibly diverse from appearance and language to culture. How do we understand this diversity as a product of evolution and migration over millions of years? In this book Peter Bellwood brings together biology, archaeology, linguistics and anthropology to provide a sweeping look at human evolution from 5 million years ago to the rise of agriculture and civilization, presenting modern human diversity as a product of the shared history of human populations around the world. Bellwood opens the book by explaining what allows us to understand and reconstruct the human past, including the importance of archaeological, biological and cultural approaches as well as an understanding of climate and chronology on vast time scales. From there he proceeds forward in time from the split with chimpanzees c. 6 million years ago, the emergence of Homo 2.5 million years ago and the appearance of modern humans c. 300 000 years ago. Each chapter is driven by a set of major questions that we have new answers to, such as when did humans first leave Africa, was Homo a new species, what was the path of migration for early humans and did early humans have discernible social life and material culture. Moving forward in time, Bellwood describes cultural and then linguistic evolution over the last 20 000 years, again driving each chapter with big questions. He concludes the book by asking how much human behavior has changed based on what we know about the past and whether humans are still evolving genetically and culturally. Ultimately this book shows that to understand human history and ongoing modern human diversity we must first understand human populations as a result of millions of years of shared genetic and cultural evolution.
