Topics in Computational Wave Propagation Mark Ainsworth, Penny Davies, Dugald B. Duncan, Paul A Martin, Bryan Rynne, 2012-12-06 This volume consists of survey articles on current topics in computational wave propagation and inverse problems written by leading experts in their respective fields The idea to compile such a volume arose in conjunction with the LMS Durham Symposium on Computational Methods for Wave Propagation in Direct Scattering held at the University of Durham from 15th to 25th July 2002 which we jointly organised The meeting attended by 70 participants from the UK and overseas was structured around a number of short three lecture survey courses on a range of topics on computational wave propagation and inverse problems beginning at the level of a graduate student We were delighted to secure the participation of distinguished international researchers to present these lectures We felt that it would be valuable to record this material for the benefit of a wider audience and the idea was hatched that the individual lecturers should be invited to contribute a survey article Fortunately many of the speakers not only agreed to undertake this arduous task but produced what we hope you will agree are the high quality contributions found in this volume Finally it is a pleasure to thank the Engineering and Physical Sciences Research Council of Great Britain and the London Mathematical Society for providing the generous support that allowed the meeting to take place Mark Ainsworth Glasgow 2003 Penny Davies Dugald Duncan Paul Martin Bryan Rynne Contents New Results on Absorbing Layers and Radiation Boundary Conditions Thomas Hagstrom

he embarked on his major projects is greater than ever A central work in the Schenkerian canon *Der Tonwille* introduced the use of voice leading graphs that remains a critical tool for many music theorists today This volume the first of a two volume English translation of Schenker's complete original text makes these important contributions available to English readers for the first time In the first five issues that make up *Der Tonwille* Schenker analyzes piano sonatas by Haydn Mozart and Beethoven as well as shorter works including preludes by Bach and various classical keyboard pieces The volume also includes the first two installments of a large scale study of Beethoven's Fifth Symphony which in common with many of the other essays offered here is comprised of a detailed analysis of the score a commentary on the sketches and autograph and related textual problems remarks on performance and a critique of the literature on the symphony Most significantly the essays in this volume are the first that consistently embrace the concept of *Urfurie* by coordinating an explanatory text with a graph of the *Urfurie* for each work discussed It also contains the most extensive expression of Schenker's outspoken philosophical political and artistic beliefs providing an important cultural perspective from which to view his theoretical work Under the leadership of William Drabkin a team of well regarded musicologists has produced this skilled and lucid translation of Schenker's influential writings an essential resource for English reading musicologists and music theorists
