Roads and Airports Pavement Surface Characteristics Maurizio Crispino, Emanuele Toraldo, 2023-06-05 Roads and Airports Pavement Surface Characteristics contains the papers presented at the 9th International Symposium on Pavement Surface Characteristics SURF 2022 Milan Italy 12-14 September 2022. The symposium was jointly organized by the Italian company that manages Italy's National Roads ANAS Ferrovie dello Stato Italiane Group, the World Road Association PIARC and Politecnico di Milano. The contributions aim to improve the quality of pavement surface characteristics while accomplishing efficiency, safety, sustainability, and addressing new generation mobility needs. The book covers topics from emerging research to engineering practice and is divided into the following sections: Advanced and performing construction methods and equipment; Next generation mobility; Data monitoring and performance assessment; Surface features and performances; Maintenance and preservation treatments; Pavement management; Economic and political strategies; Safety and risk issues; Minimizing road impacts; Sustainability and performances; Issues about materials and design; Pavements, surfaces, and urban heat islands; Weather conditions impact; Airport pavements. Roads and Airports Pavement Surface Characteristics is of interest to academics, engineers, and professionals in the fields of pavement engineering, transport infrastructure, and related disciplines.

WATERMATEX 2000 P. Lessard, Peter A. Vanrolleghem, 2001-05-31. Selected Proceedings of the 5th International Symposium on Systems Analysis and Computing in Water Quality Management, Held in Gent, Belgium, 18-20 September 2000. The focus of the IWA Specialist Group on Systems Analysis and Computing is essentially methodological. Its goal is to foster discussion of the interdisciplinary issues cutting across the many topics of interest within IWA. Consequently, the themes of the symposium did not reflect specific concerns with sewers or wastewater treatment or river basin management or surface water quality or groundwater contamination. Rather, the symposium was organized along the lines of new models, decision support systems, uncertainty and risk analysis, integrated urban wastewater systems, operations and control, sensors and monitoring, optimal experimental design, methodologies, model selection and calibration techniques, and time series analysis. Evidently, the papers may each have case-specific aspects, but they also highlight matters of methodology that are common to all, with a distinctly interdisciplinary character. There was an open call for papers, resulting in abstracts from 30 countries around the world. Papers for oral and poster presentation at the symposium were selected by the Programme Committee from full papers. They were reviewed again, and 47 of them were finally included in these proceedings. Notably, 8 of the contributions were selected among the posters through a competition announced prior to the Symposium. The collection of papers in these proceedings is a comprehensive update that will prove invaluable for those working in the fields of environmental engineering, river basin management, aquatic ecology, process optimisation, data mining, planning, and monitoring.
